Prix à la consommation et indices des prix

Janvier-mars 1990

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Information and Current Analysis Unit,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9606) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Winnipeg	(983-4020)
Halifax	(426-5331)	Regina	(780-5405)
Montréal	(283-5725)	Edmonton	(495-3027)
Ottawa	(951-8116)	Calgary	(292-6717)
Toronto	(973-6586)	Vancouver	(666-3691)

Toll-free access is provided in all provinces and territories, for users who reside **outside the local dialing area** of any of the regional reference centres.

Newfoundland and Labrador	1-800-563-4255

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Sous-section de l'information et de l'analyse courante,
Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 951-9606) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Winnipeg	(983-4020)
Halifax	(426-5331)	Regina	(780-5405)

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series in Tables in the publication. For further information on CANSIM call (613) 951-8200 or write Electronic Data Dissemination Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

This publication was prepared under the direction of:

- . **Barbara J. Slater**, Director,
Prices Division
- . **J. Arthur Ridgeway**, Chief,
Consumer Prices Section
- . **Harold Harnarine**, Head,
Information and Current Analysis Unit

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistics Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- P nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 951-8200 ou écrire à, Division de la diffusion informatique des données, Statistique Canada, Immeuble R.H. Coats, Ottawa, K1A 0T6.

HIGHLIGHTS

Consumer Price Behaviour

First Quarter, 1990

Trends in the All-items Index

Between December 1989 and March 1990 (first quarter), the All-items Consumer Price Index (CPI) for Canada increased by 1.6% in seasonally adjusted terms. This represented a considerably faster rise than the 1.0% increase reported for the previous quarter (September to December 1989). A large part of the increase in the latest quarter was concentrated in the months of January and February.

The sharper rise in the first quarter was also confirmed by the unadjusted movements. In unadjusted terms, the All-items CPI rose by 1.8% in the latest quarter, compared with an increase of 0.7% posted in the previous quarter. In addition, the average of 12-month increases for the first quarter was 5.4%, up from the rise of 5.1% reported for the previous fourth quarter, 1989.

Major Contributors to the First Quarter Change

As indicated above, the All-items index advanced by 1.8% in unadjusted terms in the first quarter, 1990. The Food component increased by 3.7%, while the All-items excluding Food index rose by 1.4%. The other six major component indexes registered increases ranging from 0.7% for Recreation, Reading and Education to 2.8% for Clothing.

The largest impact on the 1.8% rise in the All-items index resulted from a 3.7% increase in the Food index. This was followed, in rank order, by increases of 1.2% in Housing, 1.6% in Transportation and 2.8% in Clothing. The separate impact of increases of 1.2% in Tobacco Products and Alcoholic Beverages, 0.7% in Recreation, Reading and Education and 1.0% in Health and Personal Care was small.

By far, the larger impact on the 3.7% rise in the Food index resulted from an increase of 4.7% in the Food Purchased from Stores index, as the index for Food Purchased from Restaurants registered a far slower 1.2% rise. Over half of the total rise in the former sub-component resulted from a sharp 43.5% rise in the Fresh Vegetables index, associated mainly with a noticeable jump in the prices of tomatoes. Frost damage in the growing areas of Florida was largely responsible for the upward pressure on the prices of tomatoes and other types of vegetables. Price increases in the first quarter were also observed for selected fresh fruit (mostly for bananas and grapefruit), bakery products and carbonated beverages, the latter reflecting the return to regular prices from promotional levels reported mainly in December.

The Housing index advanced 1.2% in the first quarter with a substantial proportion of the increase due to a 1.7% rise in the Owned Accommodation index. Much of the latter was associated with higher mortgage interest costs and increased prices of new homes, prominent mostly in the larger cities of Alberta and British Columbia. Widespread increases in fuel oil prices (following a severe cold spell in December and a rise in crude oil prices) as well as higher rates for electricity and water were registered. A part of the overall upward pressure was offset by declines in the prices of furniture and household appliances, long-distance telephone charges and piped gas rates.

The Transportation index climbed by 1.6%, comprising increases of 1.2% in the Private Transportation index and 5.6% in the Public Transportation index. The increase in the first sub-component was associated with higher prices for gasoline and increases in auto

FAITS SAILLANTS

Comportement des prix à la consommation

Premier trimestre, 1990

Tendances de l'indice d'ensemble

Entre décembre 1989 et mars 1990 (premier trimestre), l'indice d'ensemble désaisonnalisé des prix à la consommation pour le Canada a progressé de 1.6%. Cette hausse est beaucoup plus forte que celle de 1.0% déclarée pour le trimestre précédent (septembre à décembre 1989). Au dernier trimestre, la majeure partie de la hausse est survenue en janvier et en février.

Les mouvements non désaisonnalisés de l'indice confirment également cette augmentation plus rapide. L'indice d'ensemble non désaisonnalisé s'est accru de 1.8% au cours du dernier trimestre, en comparaison d'une progression de 0.7% au trimestre précédent. En outre, la moyenne des hausses sur douze mois pour le premier trimestre s'établissait à 5.4%, en hausse par rapport à l'augmentation de 5.1% déclarée au quatrième trimestre de 1989.

Principaux facteurs de la variation au premier trimestre

Comme on l'a noté ci-dessus, l'indice d'ensemble non désaisonnalisé a progressé de 1.8% au cours du premier trimestre de 1990. L'indice des aliments s'est accru de 3.7% tandis que l'indice d'ensemble sans les aliments a progressé de 1.4%. Les indices des six autres composantes majeures ont enregistré des augmentations allant de 0.7% pour les loisirs, la lecture et la formation à 2.8% pour l'habillement.

La cause la plus importante de la hausse de 1.8% de l'indice d'ensemble est l'augmentation de 3.7% de l'indice des aliments. Viennent ensuite, par ordre d'importance, les hausses de 1.2% de l'habitation, de 1.6% des transports et de 2.8% de l'habillement. Par ailleurs, les augmentations de 1.2% des produits du tabac et des boissons alcoolisées, de 0.7% des loisirs, de la lecture et de la formation et de 1.0% de la santé et des soins personnels ont faiblement contribué à la hausse globale.

Le principal facteur de l'accroissement de 3.7% de l'indice des aliments est de loin attribuable à la majoration de 4.7% de l'indice des aliments achetés au magasin. Pour sa part, l'indice des aliments achetés au restaurant a progressé à un rythme beaucoup plus lent de 1.2%. Plus de la moitié de l'augmentation globale de la première composante d'explication par la brusque montée de 43.5% de l'indice des légumes frais, attribuable dans une large mesure au bond évident du prix des tomates. Les dégâts causés par le gel dans les secteurs agricoles de la Floride sont les principaux responsables de la poussée du prix des tomates et d'autres types de légumes. Au premier trimestre, on a également observé un relèvement du prix de certains fruits frais (surtout des bananes et des pamplemousses), des produits de boulangerie et des boissons gazeifiées, cette dernière majoration étant le résultat du retour des prix courants de ces produits qui étaient offerts, surtout en décembre, à un prix de vente publicitaire.

La majeure partie de la hausse de 1.2% de l'indice de l'habitation au premier trimestre est attribuable à la progression de 1.7% de l'indice du logement en propriété. Cette dernière augmentation est surtout liée au relèvement des coûts des intérêts hypothécaires et du prix des maisons neuves, surtout dans les grandes villes de l'Alberta et de la Colombie-Britannique. On a enregistré une hausse généralisée du prix du mazout (à la suite de la vague de froid intense survenue en décembre et de l'accroissement du prix du pétrole brut) ainsi qu'un relèvement des tarifs d'électricité et d'eau. Cette poussée a été partiellement neutralisée par la baisse du prix des meubles et des appareils ménagers, des frais d'appels interurbains et des tarifs du gaz naturel.

L'accroissement de 1.6% de l'indice du transport découle de la hausse de 1.2% de l'indice du transport privé et de 5.6% de celui du transport public. La montée de la première sous-composante est attribuable à la majoration du prix de l'essence, des primes d'assurance-automobile et des tarifs de

insurance premiums and parking rates. At the same time, prices of light trucks fell as manufacturers' extended price rebates to stimulate sales of such vehicles. The rise in the Public Transportation index was attributable mainly to increases of 6.4% in air fares and 6.1% in local bus fares. Higher rail fares were also observed in the quarter.

A large proportion of the 2.8% rise in the Clothing index was due to a 4.0% increase in the Women's Wear index. The Men's Wear index increased by a slower 2.0%. Clothing prices generally show declines in the latter part of the year, particularly in the months of November and December. The price increases noted in the first quarter, therefore represented, in part, prices returning to normal levels and, in part, the initial impact of prices on new clothing lines.

Each of the increases of 1.2% in the Tobacco Products and Alcoholic Beverages index, of 0.7% in the Recreation, Reading and Education index and of 1.0% in the Health and Personal Care index made a small contribution to the 1.8% rise in the All-items index. The first index responded mainly to higher prices for alcoholic beverages, traceable largely to higher producer costs. The second index reflected higher prices for selected seasonal athletic equipment, higher quotations for package holiday tours and increased prices for daily newspapers. The last index noted higher prices for prescribed and non-prescribed medicines, as well as selected personal care supplies.

stationnement. Parallèlement, le prix de camions légers a diminué car les fabricants ont continué à consentir des rabais de prix pour stimuler la vente de ces véhicules. La hausse de l'indice du transport public est en majeure partie attribuable aux augmentations de 6.4% des tarifs aériens et de 6.1% des tarifs du transport en commun local par autobus. On a également observé au premier trimestre une montée du prix des billets de chemin de fer.

La progression de 4.0% de l'indice des vêtements pour femmes est le principal facteur de la hausse de 2.8% de l'indice des vêtements. L'indice des vêtements pour hommes a augmenté au rythme plus lent de 2.0%. En général, le prix des vêtements a diminué dans la dernière partie de l'année, en particulier pendant les mois de novembre et décembre. Par conséquent, les hausses relevées au cours du premier trimestre s'expliquent, d'une part, par le retour des prix courants et, d'autre part, par le fait que les nouveaux vêtements coûtent initialement plus cher.

Les hausses de 1.2% de l'indice des produits du tabac et des boissons alcoolisées, de 0.7% de l'indice des loisirs, de la lecture et de la formation et de 1.0% de l'indice de la santé et des soins personnels ont chacune faiblement contribué à la montée de 1.8% de l'indice d'ensemble. L'augmentation du premier indice est surtout attribuable au renchérissement des boissons alcoolisées qui découle en majeure partie de l'accroissement du coût de production. Dans le cas du deuxième indice, la majoration du prix de certains équipements de sport saisonniers, des voyages à forfait et des quotidiens entrent en ligne de compte. Le renchérissement des médicaments sur ordonnance et sans ordonnance, de même que certains produits de soins personnels, est à l'origine de la progression du dernier indice.

INTRODUCTION

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, **The Consumer Price Index**, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements. This is presented in the form of tabular and graphic information. Some tabular information on international prices is also presented, in particular for some Canada - U.S. comparisons.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Part IV of this report contains tables for the All-items and seven major components for each province.

Place-to-place comparative retail price information forms Part V of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials. Special feature articles, which are periodically included in the publication, are presented in Part VI.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 and 5 present background information relating to place-to-place retail price comparisons.

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, **L'indice des prix à la consommation**, n° 62-001 au catalogue.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation. Ces informations sont présentées sous la forme de tableaux et de graphiques. Des tableaux comportant de l'information sur les prix internationaux sont également présentés, particulièrement en ce qui regarde certaines comparaisons entre le Canada et les É.-U.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagrégé.

La partie IV de ce rapport contient des tableaux pour l'ensemble et les sept composantes principales pour chaque province.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie V de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes. Les articles spéciaux, qui font périodiquement partie de cette publication, se retrouvent à la partie VI.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthode des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 et 5 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

(1) Seasonal adjustment of the Consumer Price Index for Canada is undertaken separately for each of the seven major components of the CPI with the quarterly calculation being made before linking or chaining takes place. The resulting seven major component indexes as well as the All-items and All-items excluding Food aggregates are then "linked" or "chained" to form continuous series starting from January 1978. The seasonally adjusted monthly data are published without further revision until the year end, when revisions to any months data may be made from January 1985 forward (the start of the 1982 basket). These revisions are published with the January release.

(1) La désaisonnalisation de l'indice des prix à la consommation pour le Canada est effectuée séparément pour chacune des sept composantes principales de l'IPC. Les calculs sont faits avant de procéder à l'enchaînement. Les indices des sept composantes principales, d'ensemble et d'ensemble sans les aliments ainsi obtenus sont ensuite "enchaînés" pour déterminer les séries continues à partir de janvier 1978. Les données désaisonnalisées mensuelles sont publiées sans autre révision jusqu'à la fin de l'année où une révision peut être effectuée pour tout mois à compter de janvier 1985 (le début du panier de 1982). Ces révisions sont émis avec la publication de janvier.

(1) Pour de plus amples renseignements et détails, consulter l'appendice 4.

(2) Nous avons laissé les espaces en blanc dans ce tableau lorsque la qualité et (ou) la quantité des prix relevés ne nous a pas permis d'établir des moyennes fiables.

(3) Whitehorse n'est pas inclus dans les moyennes pondérées des villes.

(4) Les prix du bifteck de surlonge sans la partie du filet sont relevés à Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary et Whitehorse.

(5) Chicoutimi (450 g).

(6) Un paquet donnant en tout 2.25 L.

TABLE 16. Average Retail Prices for Regular Leaded Gasoline at Full Service Filling Stations, by Selected City, by Month - Cents Per Litre(1)

Appendix 1

THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e., price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the **movement** of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for 26 cities are available at present in Part V of this publication. Inter-spatial indexes covering approximately two thirds of the CPI basket for a selected number of cities are also available in this section.

Coverage

Beginning with the December 1988 to January 1989 price change, the weights used in the Consumer Price Index are those pertaining to 1986 expenditure patterns. Data used for establishing these patterns were obtained through the 1986 Family Expenditure Surveys. The expenditure data represents the expenditures of all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1986 revealed 82 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 82 urban centres into 34 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

Appendice 1

L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le **mouvement** des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour 26 villes, à la Partie V de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

Champ d'observation

À compter de janvier 1989, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1986. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1986. Les données sur les dépenses représentent les dépenses de tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1986, 82 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 82 centres urbains en 34 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Separate CPI's are published for 18 of these centres which, together, accounted for approximately 75% of the total 1986 current consumption expenditures reported in the 82 centres. These 18 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 300 commodities are priced in each of these 18 cities while in the remaining 64 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

Des IPC distincts sont publiés pour 18 centres qui, ensemble, interviennent pour près de 75% du total des dépenses courantes de consommation déclarées en 1986 par les 82 centres. Les 18 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 300 produits dans chacune des 18 villes; ce nombre est plus faible dans les 64 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

The 1982 family expenditure patterns were used to compile the CPI from January 1985 to December 1988. In January 1989 the 1982 weights were replaced by those derived from the expenditure patterns of 1986. This updating continues the policy of updating on a four-year cycle.

La composition des dépenses des familles de 1982 a servi au calcul de l'IPC à partir de janvier 1985 jusqu'à décembre 1988. En janvier 1989, les pondérations de 1982 ont été remplacées par d'autres dérivées de la composition des dépenses de 1986. Cette mise à jour poursuit la politique de Statistique Canada de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE II. Comparison of 1982 and 1986 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABLEAU EXPLICATIF II. Comparaison des pondérations des dépenses de 1982 et de 1986 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

Major components	Weights 1982	Weights 1986
Composantes principales	Pondérations 1982	Pondérations 1982
All-items - Ensemble	100.00(1)	100.00(1)
Food - Aliments	20.02	18.05
Housing - Habitation	38.14	36.32
Clothing - Habillement	8.37	8.69
Transportation - Transports	15.75	18.29
Health and personal care - Santé et soins personnels	4.02	4.20
Recreation, reading and education - Loisirs, lecture et formation	8.25	8.84
Tobacco products and alcoholic beverages - Produits du tabac et boissons alcoolisées	5.45	5.60

(1) Figures may not add up due to rounding.

(1) Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

The weights shown in Text Table II represent expenditures in 1982 (1982 quantities valued in 1982 prices) and in 1986 (1986 quantities valued in 1986 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981 = 100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the:

Consumer Prices Section,
Prices Division, Statistics Canada,
Ottawa, Ontario,
K1A 0T6
(Telephone: (613) 951-9606).

The indexes based on 1986 weights were linked or connected in December 1988 to the appropriate indexes based on 1982 weights which had been in use since January 1985.

Les pondérations du tableau explicatif II représentent les dépenses en 1982 (quantités et prix de 1982) et en 1986 (quantités et prix de 1986). Elles ne peuvent servir à reconstruire ni à réagréger des indices sur la base de 1981 = 100. La méthode à suivre pour une telle reconstruction peut être obtenue sur demande auprès de la:

Section des prix à la consommation
Division des prix, Statistique Canada
Ottawa (Ontario)
K1A 0T6
(Téléphone: (613) 951-9606).

Les indices fondés sur les pondérations de 1986 ont été enchaînés ou raccordés en décembre 1988 aux indices correspondants fondés sur les pondérations de 1982, en usage depuis janvier 1985.

This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1981 = 100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1981 = 100 time base became effective with the release of the January 1983 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised approximately every 10 years.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1971 = 100 or 1981 = 100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights. Furthermore, the method employed in converting to the 1981 = 100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1971 or 1981 time base series, the same is not true for changes measured in terms of index points.

Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 1 involves com-

Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1981 = 100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1981 = 100 est devenue effective à partir de la diffusion de l'indice de janvier 1983. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision à tous les 10 ans environ.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1971 = 100 et 1981 = 100 sont équivalentes, les petites différences étant attribuables à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base. De plus, la méthode de conversion selon la base 1981 = 100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1971 ou 1981) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 1 consiste à prendre un taux

pounding the growth rate over the latest three-month period on the seasonally adjusted level (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", **Retail Prices and Living Costs** - Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

Reconstructed Indexes

With the release of the January 1985 Consumer Price Index, certain series were reconstructed historically to reflect the introduction of the Consumer Classification System of Statistics Canada which was introduced with the 1982 Updating. A few additional reconstructions were made with the introduction of the 1986 basket. For further information, contact Prices Division (613-951-9606 or 951-3353).

Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978, 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between 1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres **were not** included in the calculation of the official CPI for Canada. With the introduction of the 1982 Updating, these two centres were included in the calculation of the official CPI for Canada.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be

de croissance composé sur le niveau désaisonnalisé des trois derniers mois (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", **Prix de détail et coût de la vie** - Bulletin de service (n° 62-005 au catalogue), vol. 4, n° 4, avril 1975.

Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation de janvier 1985, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent l'introduction du système de classification de la consommation de Statistique Canada qui fut introduit avec la mise à jour de 1982. L'adoption du panier de 1986 a amené quelques autres remaniements. Pour plus de renseignements, communiquez avec la Division des prix (613-951-9606 ou 951-3353).

Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978, les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982=100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains **n'étaient pas** compris dans le calcul de l'IPC officiel pour le Canada. Avec l'introduction de la mise à jour de 1982, ces deux centres ont été pris en compte lors du calcul de l'IPC officiel pour le Canada.

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en

used to represent that of owned accommodation. As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the sixteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two-month lag.

Provincial CPI's

Consumer price indexes for provincial urban centres were published for the first time in the July-September 1988 issue of this publication. An article describing the coverage and method of these indexes was published in the same issue. Updated Provincial CPI's are now a permanent feature of this publication.

Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in **The Consumer Price Index, Reference Paper, Updating Based on 1986 Expenditures**, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in **Family Expenditure in Canada, 1986**, Catalogue 62-555.

The latest information on the Consumer Price Index for Canada and 18 cities is also available in the **Consumer Price Index**, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 (613-951-9606 or 613-951-3353).

propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des seize autres centres urbains pour lesquels un IPC est calculé. Les données sur les loyers utilisées sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

IPC Provinciaux

Des indices de prix à la consommation pour les centres urbains provinciaux ont été publiés pour la première fois dans le numéro de juillet-septembre 1988 de la présente publication. Un article décrivant la couverture et la méthodologie de ces indices est paru dans ce même numéro. Les IPC provinciaux mis à jour sont devenus partie intégrante de la présente publication.

Renseignements supplémentaires et publications connexes

Le Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1986, (hors-série), n° 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans **Dépenses des familles au Canada, 1986**, n° 62-555 au catalogue.

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de 18 villes sont publiés dans le bulletin mensuel **L'indice des prix à la consommation**, n° 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont disponibles. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6 (613-951-9606 ou 613-951-3353).

Appendix 2

THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1981 and February 1983, consumer prices as measured by the CPI rose 14.6% such that, goods and services which could have been purchased for \$100.00 in 1981 would cost \$114.60 in February 1983. Each consumer dollar in February 1983 therefore buys less than in 1981. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in February 1983 compared to the 1981 dollar was 87.3 ($100 \text{ cents} \times \frac{100.0}{114.6} = 87.3$ cents). This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1981 dollar at different points in time (Table 2) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

Appendice 2

LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1981 et février 1983, les prix à la consommation mesurés par l'IPC ont grimpé de 14.6% de sorte que les biens et services qu'on pouvait acheter en 1981 avec \$100.00 coûtaient \$114.60 en février 1983. Chaque dollar de consommation en février 1983 achète donc moins qu'en 1981. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en février 1983, par rapport au dollar de 1981, s'établissait à 87.3 cents ($100 \text{ cents} \times \frac{100.0}{114.6} = 87.3$ cents). Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1981 (tableau 2) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

Appendix 3

SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then falls back, subsequently to rise again. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement which reflects continuing or slowly changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

The methodologies used for removing as much of the seasonal fluctuations as possible from a series have been described in detail in numerous articles and texts on the

Appendice 3

LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, descend puis remonte à nouveau. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable qui reflète la continuité ou un changement lent de l'économie.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la ques-

subject.(1) Rather than reiterating those texts, an outline of the methodologies employed in the derivation of seasonally adjusted consumer price indexes for Canada is provided below.

With the introduction of the 1982 basket, the seasonal adjustment methodology was changed. Direct seasonal adjustment is performed at the level of the seven major components with the seasonally adjusted All-items and All-items excluding Food indexes being the weighted average of their components. This indirect seasonal adjustment of the two aggregate series ensures (except for possible rounding differences) that the aggregate movements will be within the range of their components' movements. Since each basket has its own weights, the move to indirect seasonal adjustment of the aggregates dictated the use of unlinked series as the basis for the seasonal adjustment. Estimating a separate seasonal pattern for each basket has some conceptual advantages since it means that the classification and weight changes introduced with each updating of the basket will not distort the estimates. However, there is an operational difficulty which arises due to the desirability of having at least seven years of data for estimation of the seasonal pattern and the current rapidity with which CPI baskets are updated. Given the current updating cycle, at the time a new basket is introduced, we have only three years of data for the new basket. To create a longer time series, we chain on data from the previous basket back to its beginning. This reintroduces some of the distortions present in estimating seasonal patterns from linked data.

The above distortion will be minimized through the use of concurrent seasonal adjustment rather than forecast seasonal factors. With the concurrent methodology, the seasonal pattern is estimated each month using all available data. However, to minimize revisions we will revise past indexes only at the end of each calendar year.

tion(1). Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avec l'introduction du panier 1982, la méthode de désaisonnalisation fût changée. La désaisonnalisation directe est effectuée à l'échelle des sept composantes principales; les versions désaisonnalisées de l'indice des aliments et de l'indice d'ensemble sans les aliments correspondent à la moyenne pondérée de leurs composantes. Cette désaisonnalisation indirecte des deux séries agrégées garantit que les mouvements agrégés se situeront dans les limites des mouvements de leurs composantes (exception faite des différences attribuables à l'arrondissement). Puisque chaque panier a ses propres coefficients de pondération, le passage à la méthode indirecte de désaisonnalisation des séries agrégées a entraîné l'utilisation, à titre de base de la désaisonnalisation, des séries non enchaînées. L'estimation de tendances saisonnières distinctes pour chacun des paniers représente certains avantages au point de vue conceptuel, puisqu'elle signifie que les changements apportés à la classification et aux coefficients de pondération au moment de la mise à jour du panier n'entraîneront aucune distortion. Toutefois, une difficulté opérationnelle existe étant donné, d'une part, qu'il est souhaitable d'avoir au moins sept années de données pour estimer la tendance saisonnière et, d'autre part, en raison de la rapidité avec laquelle on met maintenant à jour le panier de l'IPC. Etant donné le cycle courant de mise-à-jour, nous n'avons que trois ans de données pour un nouveau panier lorsque celui-ci est introduit. Afin de créer une série plus longue, nous enchaînons les données du nouveau panier à celles du panier précédent jusqu'à son début. Cette mesure ramène certaines distortions que l'on retrouvait dans l'estimation des tendances saisonnières des données enchaînées.

Ces distortions seront toutefois minimisées par l'utilisation de désaisonnalisations concomitantes plutôt que de coefficients saisonniers projetés. Dans la méthodologie concomitante, la tendance saisonnière est estimée chaque mois au moyen de toutes les données accessibles. Nous ne recalculerons toutefois les indices antérieurs qu'à la fin de chaque année civile, et ce pour réduire au minimum le nombre de révisions.

Appendix 4

CITY AVERAGE RETAIL PRICES

Introduction

The Average Retail Price Survey is undertaken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally undertaken during the first week of January, April, July and October.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

Calculation Methodology

City Prices. Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

Appendice 4

PRIX DE DÉTAIL MOYENS PAR VILLE

Introduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

Méthode de calcul

Prix urbains. Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas des articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

Weighted city averages. A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey can be acquired by contacting Prices Division.

Average Retail Prices for Gasoline

Tables 16 through 21 present average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the 16 urban centres for which Consumer Price Indexes are produced and cover the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

Average Retail Prices for Fuel Oil

Table 22 presents average retail prices for fuel oil. The information is collected nine times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 22 are confined to 16 urban centres and for the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

Moyennes pondérées des villes. Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

Spécification des articles

Une description des quelques 60 articles contenus dans l'enquête des prix moyens peut être obtenu en communiquant avec la Division des prix.

Prix de détail moyens de l'essence

Les tableaux 16 à 21 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. Les séries présentées se limitent aux 16 centres urbains pour lesquels on produit un IPC pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

Prix de détail moyens du mazout

Le tableau 22 présente les prix de détail moyens du mazout. Cette information est relevée neuf fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 22 se limitent à 16 centres urbains, pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these

COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créés. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique

items by means of benefits separate from those regulated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements

fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources des données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistique Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois, des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les

for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada, telephone: (613) 951-0120.

Principal commodity group	Number of items priced (if available)
Food at home	104
Meals away from home	9
Household maintenance and services	11
Household supplies	8
Communications	3
Public help (depending on location)	2-8

indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la révision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada, téléphone: (613) 951-0120.

INTERESTED IN ACQUIRING A CANADIAN ORIGINAL?

Then **Canadian Social Trends** is the acquisition for you. A first on the Canadian scene, this journal is claiming international attention from the people who need to know more about the social issues and trends of this country.

Drawing on a wealth of statistics culled from hundreds of documents, **Canadian Social Trends** looks at Canadian population dynamics, crime, education, social security, health, housing, and more.

For social policy analysts, for trendwatchers on the government or business scene, for educators and students, **Canadian Social Trends** provides the information for an improved discussion and analysis of Canadian social issues.

Published four times a year, **Canadian Social Trends** also features the latest social indicators, as well as information about new products and services available from Statistics Canada.

CANADIAN SOCIAL TRENDS

(Catalogue No. 11-008E) is \$34 annually in Canada, US\$40 in the United States and US\$48 in other countries.

To order, write to Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6 or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

For faster service, fax your order to 1-613-951-1584. Or call toll free 1-800-267-6677 and use your VISA or MasterCard.

VOUS DÉSIREZ FAIRE L'ACQUISITION D'UNE OEUVRE ORIGINALE?

Alors **Tendances sociales canadiennes** est la publication qu'il vous faut. Première en son genre sur la scène canadienne, cette revue retient l'attention des gens d'ici et d'ailleurs qui désirent en savoir plus sur les questions sociales de l'heure au pays.

À l'aide d'abondantes statistiques extraites de nombreux documents, **Tendances sociales canadiennes** brosse le tableau de la dynamique de la population canadienne, de la criminalité, de l'éducation, de la sécurité sociale, de la santé, de l'habitation et de plusieurs autres sujets.

Que ce soit pour les analystes de la politique sociale, les analystes des tendances oeuvrant au sein des administrations publiques et du monde des affaires, les enseignants ou encore les étudiants, **Tendances sociales canadiennes** dégage l'information nécessaire à des discussions et des analyses approfondies relativement aux questions sociales.

Tendances sociales canadiennes présente également les plus récents indicateurs sociaux de même que des renseignements relatifs aux produits et services qu'offre Statistique Canada.

TENDANCES SOCIALES CANADIENNES

Ce trimestriel (No 11-008F au catalogue) se vend 34 \$ l'abonnement annuel au Canada, 40 \$ US aux États-Unis et 48 \$ US dans les autres pays.

What happened to the cost of living last month?

The Consumer Price Index will tell you.

Whether you negotiate wage settlements, administer COLA clauses in labour contracts, assess government policies or are involved in renewal contracts, child support or alimony payments, you need current and detailed information on changes in the cost of living.

Compiled monthly (and published within 20 days of the month's end), **The Consumer Price Index** gives you a precise account of the latest fluctuations in consumer prices.

This monthly publication covers:

- transportation
- food
- clothing
- housing
- health and personal care
- recreation, reading and education
- tobacco products and alcoholic beverages

Over 400 items, ranging from milk to parking, household furnishings to reading material, are included.

Price indexes are presented nationally and for 18 major Canadian cities. In each issue you receive month-to-month percentage comparisons and trends over the last five years. And each issue analyzes the main causes of change.

Get the facts.

Subscribe to **The Consumer Price Index** (Catalogue No. 62-001) for the authoritative measure of the purchasing power of the Canadian consumer dollar. A subscription to this monthly is available for \$93 in Canada, US\$112 in the United States and US\$130 in other countries.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

Qu'en était-il du coût de la vie le mois dernier ?

L'indice des prix à la consommation répond à votre question.

Que vous ayez à négocier des règlements salariaux, à administrer des clauses d'indemnité de vie chère ou à évaluer des politiques gouvernementales, que vous vous occupiez du renouvellement de contrats, de pensions alimentaires ou d'allocations d'entretien, vous avez besoin de données récentes et détaillées sur les fluctuations du coût de la vie.

Établi mensuellement, et publié dans les 20 jours suivant la fin de chaque mois, **L'indice des prix à la consommation** vous renseigne de façon précise sur les plus récentes fluctuations des prix à la consommation.

Cette publication mensuelle porte sur:

- l'alimentation
- l'habillement
- l'habitation
- le transport
- la santé et les soins personnels
- les loisirs, la lecture et la formation
- les produits du tabac et les boissons alcoolisées

Plus de 400 articles sont inclus, allant du lait au stationnement en passant par l'ameublement de maison et le matériel de lecture.

Les indices de prix sont donnés pour l'ensemble du pays et 18 principales villes canadiennes. Chaque numéro présente des comparaisons des pourcentages mois après mois et les tendances au cours des cinq dernières années. En outre, chaque numéro analyse les principales causes de changement.

Abonnez-vous !

L'indice des prix à la consommation (n° 62-001 au catalogue) vous permet d'obtenir une évaluation fiable du pouvoir d'achat du dollar canadien. L'abonnement à cette publication mensuelle coûte 93 \$ au Canada, 112 \$ US aux États-Unis et 130 \$ US dans les autres pays.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6 ou communiquer avec le Centre régional de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Information and Current Analysis Unit,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9606) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Winnipeg	(983-4020)
Halifax	(426-5331)	Regina	(780-5405)
Montréal	(283-5725)	Edmonton	(495-3027)
Ottawa	(951-8116)	Calgary	(292-6717)
Toronto	(973-6586)	Vancouver	(666-3691)

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series in Tables in the publication. For further information on CANSIM call (613) 951-8200 or write Electronic Data Dissemination Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

This publication was prepared under the direction of:

- . **Barbara J. Slater**, Director,
Prices Division
- . **J. Arthur Ridgeway**, Chief,
Consumer Prices Section
- . **Harold Harnarine**, Head,
Information and Current Analysis Unit

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistics Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- P nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 951-8200 ou écrire à, Division de la diffusion informatique des données, Statistique Canada, Immeuble R.H. Coats, Ottawa, K1A 0T6.

HIGHLIGHTS

Consumer Price Behaviour

Second Quarter, 1990

Trends in the All-items Index

Between March and June 1990 (second quarter), the All-items Consumer Price Index (CPI) for Canada increased by 0.7% in seasonally adjusted terms. This rise indicated a notable slow down from the 1.6% increase reported for the first quarter (December 1989 to March 1990). The increase in the latest quarter was concentrated in the months of May and June.

The slower rise in the second quarter was also supported by the unadjusted movements. In the second quarter, the All-items index rose by 0.9%, a far slower rate compared to the 1.8% increase reported in the first quarter. In addition, the average of 12-month increases in the latest quarter was also a slower 4.6%, compared to the 5.4% advance posted in the first quarter.

Major Contributors to the First Quarter Change

The unadjusted rise of 0.9% in the second quarter resulted from increases of 0.9% in the Food index and 1.0% in the index for All-items excluding Food. All the major non-food components of the CPI registered increases ranging from 0.1% for Clothing to 4.0% for Tobacco Products and Alcoholic Beverages.

Over one-third of the 0.9% rise in the All-items index was caused by an advance of 0.9% in the Housing index. The Tobacco Products and Alcoholic Beverages index, up 4.0%, accounted for an additional one quarter of the change. Also, over seventeen percent of the overall increase was attributable to the 0.9% rise in the Food index. The contributions associated with increases in each of the remaining major component indexes varied from one percent (Clothing) to eight percent (Health and Personal Care).

A large part of the 0.9% increase in the Housing index originated from a rise of 1.0% in the Owned Accommodation index. The latter was dominated by higher mortgage interest costs, the impact of which was moderated by a fall of 0.7% in the price of new homes. Falling house prices were observed mainly in Toronto and the larger cities of Alberta and British Columbia. Further upward pressures on the Housing index resulted from increased charges on rented accommodation (0.8%) and higher hotel/motel rates (4.5%). The latter reflected, in part, the introduction of summer rates. Electricity rates rose in several cities, but this was moderated, to some extent, by price declines for fuel oil and piped gas. Further price increases were observed for paper products, selected horticultural goods and wooden furniture. At the same time, price declines were registered for cooking equipment and selected household textiles.

The 4.0% increase in the Tobacco Products and Alcoholic Beverages index resulted from price advances of 6.2% for cigarettes and 2.5% for alcoholic beverages. Most of the rise in the Cigarette index appeared in May and was largely attributable to tax increases imposed by the governments of Nova Scotia, Québec and Ontario. A smaller increase in April resulted from tax increases initiated by Prince Edward Island, Alberta, British Columbia and the North West Territories. The prices of alcoholic beverages rose sharply in May, resulting from higher mark-ups by provincial distributing authorities and increases in manufacturers' costs.

FAITS SAILLANTS

Comportement des prix à la consommation

Deuxième trimestre, 1990

Tendances de l'indice d'ensemble

Entre mars et juin 1990 (deuxième trimestre), l'indice d'ensemble désaisonnalisé des prix à la consommation pour le Canada a augmenté de 0.7%. Cette augmentation représente un ralentissement notable par rapport à la hausse de 1.6% déclarée pour le trimestre précédent (décembre 1989 à mars 1990). Au dernier trimestre, la majeure partie de l'augmentation est survenue en mai et juin.

Les mouvements non désaisonnalisés de l'indice appuient également cette augmentation plus lente. Au deuxième trimestre, l'indice d'ensemble a enregistré une hausse de 0.9%, soit une hausse beaucoup plus faible que celle de 1.8% déclarée au premier trimestre. De plus, la moyenne des hausses sur douze mois pour le dernier trimestre s'établit à 4.6%, en baisse par rapport à l'augmentation de 5.4% enregistrée au premier trimestre.

Principaux facteurs de la variation au deuxième trimestre

L'augmentation de 0.9% de l'indice d'ensemble désaisonnalisé au cours du deuxième trimestre est attribuable à la hausse de 0.9% de l'indice des aliments ainsi qu'à celle de 1.0% de l'indice d'ensemble sans les aliments. Toutes les principales composantes non-alimentaires de l'indice des prix à la consommation ont enregistré des hausses variant de 0.1% pour l'habillement à 4.0% pour les produits du tabac et les boissons alcoolisées.

Plus du tiers de l'augmentation de 0.9% de l'indice d'ensemble est attribuable à la progression de 0.9% de l'indice de l'habitation. La hausse de 4.0% de l'indice des produits du tabac et des boissons alcoolisées est responsable du quart de la variation. En outre, plus de dix-sept pourcent de l'augmentation globale est attribuable à la hausse de 0.9% de l'indice des aliments. La contribution des augmentations enregistrées par chacun des autres principaux indices varie de un pourcent (habillement) à huit pourcent (santé et soins personnels).

La cause la plus importante de l'augmentation de 0.9% de l'indice de l'habitation est la hausse de 1.0% de l'indice du logement en propriété. Cette dernière hausse est surtout liée au relèvement des coûts des intérêts hypothécaires, dont l'influence a été atténuée par la chute de 0.7% du prix des maisons neuves. On observe une baisse du prix des maisons surtout à Toronto ainsi que dans les grandes villes de l'Alberta et de la Colombie-Britannique. L'indice de l'habitation a aussi été influencé à la hausse par l'augmentation des frais de logement en location (0.8%) et des tarifs des chambres d'hôtels et de motels (4.5%). Cette dernière augmentation reflète, en partie, l'entrée en vigueur des tarifs d'été. Les tarifs d'électricité ont augmenté dans plusieurs villes, mais ces augmentations ont été en partie atténuées par la baisse du prix du mazout et du gaz naturel. On a également observé une hausse du prix des produits en papier, de certains produits horticoles ainsi que des meubles en bois. On a enregistré simultanément des baisses du prix du matériel de cuisine et de certains articles ménagers en matière textile.

L'augmentation de 4.0% de l'indice des produits du tabac et des boissons alcoolisées résulte de la montée du prix des cigarettes (6.2%) et des boissons alcoolisées (2.5%). La part la plus importante de la hausse de l'indice des cigarettes a été enregistrée en mai et est attribuable dans une large mesure aux augmentations de taxes imposées par les gouvernements de la Nouvelle-Écosse, du Québec et de l'Ontario. La hausse plus faible enregistrée en avril résulte des augmentations de taxes imposées par les gouvernements de l'Île-du-Prince-Édouard, de l'Alberta, de la Colombie-Britannique et des Territoires du Nord-Ouest. Le prix des boissons alcoolisées a enregistré une brusque hausse en mai à la suite de l'augmentation de la marge commerciale imposée par les distributeurs provinciaux et de la montée des coûts de production.

The Food index climbed by 0.9% in the second quarter as the index for Food Purchased from Stores also rose by 0.9% and index for Food Purchased from Restaurants advanced by 1.3%. The rise in prices of food purchased in grocery stores was concentrated to a large extent in meat products which rose an average 4.7% in the quarter. Beef prices advanced 4.0%, partly reflecting increased seasonal demand. Prices of pork escalated 15.2%, a substantial proportion of which appeared to originate from sharp increases in demand. Prices of cured meat as well as prepared and ready cooked meat products rose by 8.2% and 5.1% respectively. The Fresh Fruit index increased 8.1%, mostly attributable to seasonally higher prices for apples and oranges, offset partially by lower prices for bananas. Part of the upward pressure on food prices was offset by a fall of 12.7% in the Fresh Vegetables index, caused mainly by a sharp drop in the prices of tomatoes.

A substantially smaller contribution to the overall change in the All-items index in the second quarter resulted from a 1.9% increase in the Health and Personal Care index. The Health Care index rose by 2.9% with most of its influence coming from higher dental care charges. Personal care charges also rose an average of 1.2%, as quotations on hair grooming services increased by 2.2%.

The Recreation, Reading and Education index moved up by 0.7% in the second quarter. The largest impact originated from a 0.8% increase in the Recreation index, due largely to increases in fees and dues paid for the use of recreational facilities and in the prices of photographic goods. Prices of selected daily newspapers rose by 1.4% on average, causing the Reading index to rise by 0.5%.

The relatively small 0.2% rise in the Transportation index reflected the net outcome of several opposing price movements. Most of the upward pressure came from higher gasoline prices which registered increases in every month of the second quarter. Increases were also noted for selected auto maintenance and repair charges, insurance premiums, registration fees, rail fares and highway bus fares. Most of the offsetting effects resulted from declines in the prices of new automobiles observed in April and May, reflecting enhanced price rebates, offered by manufacturers. Air fares also fell by an average of 3.0% in the quarter.

The Clothing index edged up by 0.1%, as the Girls' Wear index and the Boys' Wear index increased by 1.7% and 0.2% respectively. In addition, laundering and dry-cleaning services rose by 2.8%. Much of this upward impact was cancelled by declines of 0.2%, registered by both the Women's Wear and the Mens' Wear index.

L'indice des aliments a progressé de 0.9% au cours du deuxième trimestre ce qui s'explique par le fait que l'indice des aliments achetés au magasin a aussi augmenté de 0.9% et que l'indice des aliments achetés au restaurant a été majoré de 1.3%. Le principal facteur de l'augmentation du prix des aliments achetés au magasin est la hausse moyenne de 4.7% du prix des produits à base de viande qui a été enregistrée ce trimestre. Le prix du boeuf a été majoré de 4.0% ce qui traduit partiellement l'accroissement de la demande saisonnière. Le prix du porc a enregistré une montée de 15.2%, dont une part substantielle semble être attribuable à une brusque augmentation de la demande. Le prix de la viande de salaison et celui des préparations à base de viande et viandes cuites ont enregistré des hausses de 8.2% et 5.1% respectivement. L'augmentation de 8.1% de l'indice des fruits frais est surtout attribuable à la hausse saisonnière du prix des pommes et des oranges et est partiellement compensée par la baisse du prix des bananes. Une partie de la poussée à la hausse exercée sur les prix des aliments est contrebalancée par la chute de 12.7% de l'indice des légumes frais attribuable surtout à la brusque baisse du prix des tomates.

Au deuxième trimestre, l'augmentation de 1.9% de l'indice de la santé et des soins personnels a contribué beaucoup plus faiblement à la variation globale de l'indice d'ensemble. L'indice des soins de santé a progressé de 2.9% sous l'influence, pour la plus grande part, de la majoration des frais dentaires. Les frais de soins personnels ont aussi augmenté en moyenne de 1.2% en raison du relèvement de 2.2% des prix déclarés pour les services de coiffure.

On observe un accroissement de 0.7% de l'indice des loisirs, de la lecture et de la formation au deuxième trimestre. Le principal facteur de cet accroissement est la progression de 0.8% de l'indice des loisirs qui est largement attribuable à la majoration des droits d'adhésion versés pour l'utilisation d'installations de loisirs et du prix du matériel photographique. Le prix de certains quotidiens a augmenté en moyenne de 1.4% ce qui a entraîné une hausse de 0.5% de l'indice de la lecture.

La hausse relativement faible de 0.2% de l'indice du transport résulte de la combinaison de plusieurs variations de prix contraires. C'est surtout le prix de l'essence, qui a enregistré des augmentations à chaque mois du deuxième trimestre, qui est responsable de la poussée à la hausse. On observe aussi des augmentations de certains frais d'entretien et de réparation des automobiles, primes d'assurance-automobile, frais d'immatriculation, billets de chemin de fer et frais de transport par autocar. L'effet compensatoire est attribuable pour la plus grande part à la baisse du prix des automobiles neuves observée en avril et mai, baisse qui traduit l'augmentation des rabais offerts par les fabricants. Les tarifs aériens ont aussi diminué en moyenne de 3.0% au cours du trimestre.

L'indice de l'habillement s'est accru lentement de 0.1%, ce qui s'explique par les augmentations de 1.7% et 0.2% enregistrées respectivement par l'indice des vêtements pour filles et l'indice des vêtements pour garçons. Le prix des services de blanchissage et de nettoyage à sec a aussi enregistré une hausse de 2.8%. La plus grande partie de cette poussée à la hausse a été neutralisée par la baisse de 0.2% enregistrée à la fois par l'indice des vêtements pour femmes et celui des vêtements pour hommes.

INTRODUCTION

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, **The Consumer Price Index**, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements. This is presented in the form of tabular and graphic information. Some tabular information on international prices is also presented, in particular for some Canada - U.S. comparisons.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Part IV of this report contains tables for the All-items and seven major components for each province.

Place-to-place comparative retail price information forms Part V of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials. Special feature articles, which are periodically included in the publication, are presented in Part VI.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 and 5 present background information relating to place-to-place retail price comparisons.

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, **L'indice des prix à la consommation**, n^o 62-001 au catalogue.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation. Ces informations sont présentées sous la forme de tableaux et de graphiques. Des tableaux comportant de l'information sur les prix internationaux sont également présentés, particulièrement en ce qui regarde certaines comparaisons entre le Canada et les É.-U.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagrégré.

La partie IV de ce rapport contient des tableaux pour l'ensemble et les sept composantes principales pour chaque province.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie V de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes. Les articles spéciaux, qui font périodiquement partie de cette publication, se retrouvent à la partie VI.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthode des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 et 5 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

(1) Pour de plus amples renseignements et détails, consulter l'appendice 4.

(2) Nous avons laissé les espaces en blanc dans ce tableau lorsque la qualité et (ou) la quantité des prix relevés ne nous a pas permis d'établir des moyennes fiables.

(3) Whitehorse n'est pas inclus dans les moyennes pondérées des villes.

(4) Les prix du bifteck de surlonge sans la partie du filet sont relevés à Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary et Whitehorse.

(5) Chicoutimi (450 g).

(6) Un paquet donnant en tout 2.25 L.

Appendix 1

THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e., price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the **movement** of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for 26 cities are available at present in Part V of this publication. Inter-spatial indexes covering approximately two thirds of the CPI basket for a selected number of cities are also available in this section.

Coverage

Beginning with the December 1988 to January 1989 price change, the weights used in the Consumer Price Index are those pertaining to 1986 expenditure patterns. Data used for establishing these patterns were obtained through the 1986 Family Expenditure Surveys. The expenditure data represents the expenditures of all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1986 revealed 82 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 82 urban centres into 34 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

Appendice 1

L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le **mouvement** des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour 26 villes, à la Partie V de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

Champ d'observation

À compter de janvier 1989, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1986. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1986. Les données sur les dépenses représentent les dépenses de tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1986, 82 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 82 centres urbains en 34 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Separate CPI's are published for 18 of these centres which, together, accounted for approximately 75% of the total 1986 current consumption expenditures reported in the 82 centres. These 18 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 300 commodities are priced in each of these 18 cities while in the remaining 64 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

Des IPC distincts sont publiés pour 18 centres qui, ensemble, interviennent pour près de 75% du total des dépenses courantes de consommation déclarées en 1986 par les 82 centres. Les 18 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 300 produits dans chacune des 18 villes; ce nombre est plus faible dans les 64 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

The 1982 family expenditure patterns were used to compile the CPI from January 1985 to December 1988. In January 1989 the 1982 weights were replaced by those derived from the expenditure patterns of 1986. This updating continues the policy of updating on a four-year cycle.

La composition des dépenses des familles de 1982 a servi au calcul de l'IPC à partir de janvier 1985 jusqu'à décembre 1988. En janvier 1989, les pondérations de 1982 ont été remplacées par d'autres dérivées de la composition des dépenses de 1986. Cette mise à jour poursuit la politique de Statistique Canada de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE II. Comparison of 1982 and 1986 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABLEAU EXPLICATIF II. Comparaison des pondérations des dépenses de 1982 et de 1986 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

Major components	Weights 1982	Weights 1986
Composantes principales	Pondérations 1982	Pondérations 1982
All-items - Ensemble	100.00(1)	100.00(1)
Food - Aliments	20.02	18.05
Housing - Habitation	38.14	36.32
Clothing - Habillement	8.37	8.69
Transportation - Transports	15.75	18.29
Health and personal care - Santé et soins personnels	4.02	4.20
Recreation, reading and education - Loisirs, lecture et formation	8.25	9.84
Tobacco products and alcoholic beverages - Produits du tabac et boissons alcoolisées	5.45	5.60

(1) Figures may not add up due to rounding.

(1) Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

The weights shown in Text Table II represent expenditures in 1982 (1982 quantities valued in 1982 prices) and in 1986 (1986 quantities valued in 1986 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981 = 100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the:

Consumer Prices Section,
Prices Division, Statistics Canada,
Ottawa, Ontario,
K1A 0T6
(Telephone: (613) 951-9606).

The indexes based on 1986 weights were linked or connected in December 1988 to the appropriate indexes based on 1982 weights which had been in use since January 1985.

Les pondérations du tableau explicatif II représentent les dépenses en 1982 (quantités et prix de 1982) et en 1986 (quantités et prix de 1986). Elles ne peuvent servir à reconstruire ni à réagréger des indices sur la base de 1981 = 100. La méthode à suivre pour une telle reconstruction peut être obtenue sur demande auprès de la:

Section des prix à la consommation
Division des prix, Statistique Canada
Ottawa (Ontario)
K1A 0T6
(Téléphone: (613) 951-9606).

Les indices fondés sur les pondérations de 1986 ont été enchaînés ou raccordés en décembre 1988 aux indices correspondants fondés sur les pondérations de 1982, en usage depuis janvier 1985.

This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1986 = 100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1986 = 100 time base became effective with the release of the June 1990 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised periodically.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1981 = 100 or 1986 = 100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights. Furthermore, the method employed in converting to the 1986 = 100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1981 or 1986 time base series, the same is not true for changes measured in terms of index points.

Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 1 involves com-

Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1986 = 100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1986 = 100 est devenue effective à partir de la diffusion de l'indice de juin 1990. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision périodiquement.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1981 = 100 et 1986 = 100 sont équivalentes, les petites différences étant attribuables à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base. De plus, la méthode de conversion selon la base 1986 = 100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1981 ou 1986) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 1 consiste à prendre un taux

pounding the growth rate over the latest three-month period on the seasonally adjusted level (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", **Retail Prices and Living Costs** - Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

Reconstructed Indexes

With the release of the January 1985 Consumer Price Index, certain series were reconstructed historically to reflect the introduction of the Consumer Classification System of Statistics Canada which was introduced with the 1982 Updating. A few additional reconstructions were made with the introduction of the 1986 basket. For further information, contact Prices Division (613-951-9606 or 951-3353).

Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978, 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between 1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres were not included in the calculation of the official CPI for Canada. With the introduction of the 1982 Updating, these two centres were included in the calculation of the official CPI for Canada.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be

de croissance composé sur le niveau désaisonnalisé des trois derniers mois (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", **Prix de détail et coût de la vie** - Bulletin de service (n° 62-005 au catalogue), vol. 4, n° 4, avril 1975.

Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation de janvier 1985, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent l'introduction du système de classification de la consommation de Statistique Canada qui fut introduit avec la mise à jour de 1982. L'adoption du panier de 1986 a amené quelques autres remaniements. Pour plus de renseignements, communiquez avec la Division des prix (613-951-9606 ou 951-3353).

Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978, les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982=100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains n'étaient pas compris dans le calcul de l'IPC officiel pour le Canada. Avec l'introduction de la mise à jour de 1982, ces deux centres ont été pris en compte lors du calcul de l'IPC officiel pour le Canada.

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en

used to represent that of owned accommodation. As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the sixteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two-month lag.

Provincial CPI's

Consumer price indexes for provincial urban centres were published for the first time in the July-September 1988 issue of this publication. An article describing the coverage and method of these indexes was published in the same issue. Updated Provincial CPI's are now a permanent feature of this publication.

Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in **The Consumer Price Index, Reference Paper, Updating Based on 1986 Expenditures**, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in **Family Expenditure in Canada, 1986**, Catalogue 62-555.

The latest information on the Consumer Price Index for Canada and 18 cities is also available in the **Consumer Price Index**, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 (613-951-9606 or 613-951-3353).

propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des seize autres centres urbains pour lesquels un IPC est calculé. Les données sur les loyers utilisées sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

IPC Provinciaux

Des indices de prix à la consommation pour les centres urbains provinciaux ont été publiés pour la première fois dans le numéro de juillet-septembre 1988 de la présente publication. Un article décrivant la couverture et la méthodologie de ces indices est paru dans ce même numéro. Les IPC provinciaux mis à jour sont devenus partie intégrante de la présente publication.

Renseignements supplémentaires et publications connexes

Le Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1986, (hors-série), n° 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans **Dépenses des familles au Canada, 1986**, n° 62-555 au catalogue.

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de 18 villes sont publiés dans le bulletin mensuel **L'indice des prix à la consommation**, n° 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont disponibles. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6 (613-951-9606 ou 613-951-3353).

THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1986 and June 1990, consumer prices as measured by the CPI rose 19.2% such that, goods and services which could have been purchased for \$100.00 in 1986 would cost \$119.20 in June 1990. Each consumer dollar in June 1990 therefore buys less than in 1986. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in June 1990 compared to the 1986

dollar was 83.9 (100 cents $\times \frac{100.0}{119.2} = 83.9$ cents). This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1986 dollar at different points in time (Table 2) should note that, as in the case of the Consumer Price Index from which the numbers are derived the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1986 et juin 1990, les prix à la consommation mesurés par l'IPC ont grimpé de 19.2% de sorte que les biens et services qu'on pouvait acheter en 1986 avec \$100.00 coûtaient \$119.20 en juin 1990. Chaque dollar de consommation en juin 1990 achète donc moins qu'en 1986. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en juin 1990, par rapport au dollar de 1986,

s'établissait à 83.9 cents (100 cents $\times \frac{100.0}{119.2} = 83.9$ cents). Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1986 (tableau 2) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then falls back, subsequently to rise again. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement which reflects continuing or slowly changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

The methodologies used for removing as much of the seasonal fluctuations as possible from a series have been described in detail in numerous articles and texts on the

LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, descend puis remonte à nouveau. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable qui reflète la continuité ou un changement lent de l'économie.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la ques-

subject.(1) Rather than reiterating those texts, an outline of the methodologies employed in the derivation of seasonally adjusted consumer price indexes for Canada is provided below.

With the introduction of the 1982 basket, the seasonal adjustment methodology was changed. Direct seasonal adjustment is performed at the level of the seven major components with the seasonally adjusted All-items and All-items excluding Food indexes being the weighted average of their components. This indirect seasonal adjustment of the two aggregate series ensures (except for possible rounding differences) that the aggregate movements will be within the range of their components' movements. Since each basket has its own weights, the move to indirect seasonal adjustment of the aggregates dictated the use of unlinked series as the basis for the seasonal adjustment. Estimating a separate seasonal pattern for each basket has some conceptual advantages since it means that the classification and weight changes introduced with each updating of the basket will not distort the estimates. However, there is an operational difficulty which arises due to the desirability of having at least seven years of data for estimation of the seasonal pattern and the current rapidity with which CPI baskets are updated. Given the current updating cycle, at the time a new basket is introduced, we have only three years of data for the new basket. To create a longer time series, we chain on data from the previous basket back to its beginning. This reintroduces some of the distortions present in estimating seasonal patterns from linked data.

The above distortion will be minimized through the use of concurrent seasonal adjustment rather than forecast seasonal factors. With the concurrent methodology, the seasonal pattern is estimated each month using all available data. However, to minimize revisions we will revise past indexes only at the end of each calendar year.

tion(1). Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avec l'introduction du panier 1982, la méthode de désaisonnalisation fût changée. La désaisonnalisation directe est effectuée à l'échelle des sept composantes principales; les versions désaisonnalisées de l'indice des aliments et de l'indice d'ensemble sans les aliments correspondent à la moyenne pondérée de leurs composantes. Cette désaisonnalisation indirecte des deux séries agrégées garantit que les mouvements agrégés se situeront dans les limites des mouvements de leurs composantes (exception faite des différences attribuables à l'arrondissement). Puisque chaque panier a ses propres coefficients de pondération, le passage à la méthode indirecte de désaisonnalisation des séries agrégées a entraîné l'utilisation, à titre de base de la désaisonnalisation, des séries non enchaînées. L'estimation de tendances saisonnières distinctes pour chacun des paniers représente certains avantages au point de vue conceptuel, puisqu'elle signifie que les changements apportés à la classification et aux coefficients de pondération au moment de la mise à jour du panier n'entraîneront aucune distortion. Toutefois, une difficulté opérationnelle existe étant donné, d'une part, qu'il est souhaitable d'avoir au moins sept années de données pour estimer la tendance saisonnière et, d'autre part, en raison de la rapidité avec laquelle on met maintenant à jour le panier de l'IPC. Étant donné le cycle courant de mise-à-jour, nous n'avons que trois ans de données pour un nouveau panier lorsque celui-ci est introduit. Afin de créer une série plus longue, nous enchaînons les données du nouveau panier à celles du panier précédent jusqu'à son début. Cette mesure ramène certaines distorsions que l'on retrouvait dans l'estimation des tendances saisonnières des données enchaînées.

Ces distorsions seront toutefois minimisées par l'utilisation de désaisonnalisations concomitantes plutôt que de coefficients saisonniers projetés. Dans la méthodologie concomitante, la tendance saisonnière est estimée chaque mois au moyen de toutes les données accessibles. Nous ne recalculerons toutefois les indices antérieurs qu'à la fin de chaque année civile, et ce pour réduire au minimum le nombre de révisions.

CITY AVERAGE RETAIL PRICESIntroduction

The Average Retail Price Survey is undertaken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally undertaken during the first week of January, April, July and October.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

Calculation Methodology

City Prices. Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

PRIX DE DÉTAIL MOYENS PAR VILLEIntroduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

Méthode de calcul

Prix urbains. Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas de ces articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

Weighted city averages. A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

Moyennes pondérées des villes. Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey can be acquired by contacting Prices Division.

Spécification des articles

Une description des quelques 60 articles contenus dans l'enquête des prix moyens peut être obtenu en communiquant avec la Division des prix.

Average Retail Prices for Gasoline

Tables 16 through 21 present average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the 16 urban centres for which Consumer Price Indexes are produced and cover the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

Prix de détail moyens de l'essence

Les tableaux 16 à 21 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. Les séries présentées se limitent aux 16 centres urbains pour lesquels on produit un IPC pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

Average Retail Prices for Fuel Oil

Table 22 presents average retail prices for fuel oil. The information is collected nine times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 22 are confined to 16 urban centres and for the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

Prix de détail moyens du mazout

Le tableau 22 présente les prix de détail moyens du mazout. Cette information est relevée neuf fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 22 se limitent à 16 centres urbains, pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these

COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créés. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique

items by means of benefits separate from those regulated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements

fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources des données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistique Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois, des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les

for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada, telephone: (613) 951-0120.

Principal commodity group	Number of items priced (if available)
Food at home	104
Meals away from home	9
Household maintenance and services	11
Household supplies	8
Communications	3
Domestic help (depending on location)	2-8

indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la revision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada, téléphone: (613) 951-0120.

Français au v

What happened to the cost of living last month?

The Consumer Price Index will tell you.

Whether you negotiate wage settlements, administer COLA clauses in labour contracts, assess government policies or are involved in renewal contracts, child support or alimony payments, you need current and detailed information on changes in the cost of living.

Compiled monthly (and published within 20 days of the month's end), **The Consumer Price Index** gives you a precise account of the latest fluctuations in consumer prices.

This monthly publication covers:

- transportation
- health and personal care
- food
- recreation, reading and education
- clothing
- tobacco products and alcoholic beverages
- housing

Over 400 items, ranging from milk to parking, household furnishings to reading material, are included.

Price indexes are presented nationally and for 18 major Canadian cities. In each issue you receive month-to-month percentage comparisons and trends over the last five years. And each issue analyzes the main causes of change.

Get the facts.

Subscribe to **The Consumer Price Index** (Catalogue No. 62-001) for the authoritative measure of the purchasing power of the Canadian consumer dollar. A subscription to this monthly is available for \$93 in Canada, US\$112 in the United States and US\$130 in other countries.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

Qu'en était-il du coût de la vie le mois dernier ?

L'indice des prix à la consommation répond à votre question.

Que vous ayez à négocier des règlements salariaux, à administrer des clauses d'indemnité de vie chère ou à évaluer des politiques gouvernementales, que vous vous occupiez du renouvellement de contrats, de pensions alimentaires ou d'allocations d'entretien, vous avez besoin de données récentes et détaillées sur les fluctuations du coût de la vie.

Établi mensuellement, et publié dans les 20 jours suivant la fin de chaque mois, **L'indice des prix à la consommation** vous renseigne de façon précise sur les plus récentes fluctuations des prix à la consommation.

Cette publication mensuelle porte sur:

- l'alimentation
- l'habillement
- l'habitation
- le transport
- la santé et les soins personnels
- les loisirs, la lecture et la formation
- les produits du tabac et les boissons alcoolisées

Plus de 400 articles sont inclus, allant du lait au stationnement en passant par l'ameublement de maison et le matériel de lecture.

Les indices de prix sont donnés pour l'ensemble du pays et 18 principales villes canadiennes. Chaque numéro présente des comparaisons des pourcentages mois après mois et les tendances au cours des cinq dernières années. En outre, chaque numéro analyse les principales causes de changement.

Abonnez-vous !

L'indice des prix à la consommation (n° 62-001 au catalogue) vous permet d'obtenir une évaluation fiable du pouvoir d'achat du dollar canadien. L'abonnement à cette publication mensuelle coûte 93 \$ au Canada, 112 \$ US aux États-Unis et 130 \$ US dans les autres pays.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6 ou communiquer avec le Centre régional de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

PICK A TOPIC... ANY TOPIC

CHOISISSEZ UN SUJET... N'IMPORTE LEQUEL

Now a redesigned Statistics Canada Catalogue will simplify your search for the most up-to-date or historic facts. An expanded and improved keyword index, cross-referencing, increased subject detail and listings by geographical area provide easy access to hundreds of Statistics Canada products and services.

- ☐ Know the topic but not the "official title"? No matter how wide or narrow the topic – or how little you know about it – you'll appreciate how quickly the cross-referencing leads you to the right source.
- ☐ You'll find sources of key statistics like consumer price indexes, import/export figures, or population characteristics down to the village level. From the most popular topics of the day like employment, income, trade and education to more detailed research studies like mineral products shipped from Canadian ports or Caribbean immigrants in urban areas... you'll find it all.
- ☐ This expanded edition of the Statistics Canada Catalogue includes descriptions of our full range of services – from publications and maps to microdata files and diskettes. And, many of our electronic product listings include the name and phone number of a contact within Statistics Canada giving you a direct line to more detailed information.
- ☐ As always, you'll find sections on how to get more help... on-line search techniques in libraries... discount and order information... and the locations of our Reference Centres. You'll especially appreciate that this year's Catalogue is bound in a durable, plasticized cover to withstand intensive use.
- ☐ For ease and completeness in your information search get the Statistics Canada Catalogue (cat. # 11-204E) for \$13.95 in Canada, US\$17 in the U.S. and US\$20 in other countries. To order your copy write to Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6 or you can FAX your order to (613) 951-1584. For faster service using VISA or MasterCard, call toll-free:

1-800-267-6677.

Dorénavant le Catalogue de Statistique Canada amélioré simplifiera vos recherches de données récentes ou historiques. Son index revu et augmenté comprend des renvois, des sujets plus détaillés et des références géographiques vous permettant d'accéder rapidement à des centaines de produits et de services de Statistique Canada.

- ☐ Vous connaissez le sujet sans connaître le terme technique ? Peu importe si le sujet est général ou spécifique, vous apprécierez l'accès rapide que vous procure les renvois.
- ☐ Vous repérerez facilement les sources de statistiques essentielles comme l'indice des prix à la consommation, les importations – exportations ou encore, les caractéristiques de la population jusqu'à l'échelle des villages. Des sujets populaires du jour tels l'emploi, le revenu, le commerce et l'éducation jusqu'aux études plus spécifiques comme les produits minéraux expédiés à partir des ports canadiens ou les immigrants antillais dans les régions urbaines, vous trouverez tout !
- ☐ L'édition augmentée du Catalogue de Statistique Canada contient bien plus encore. Elle présente en détail notre gamme complète de services, depuis les publications et les cartes jusqu'aux disquettes et fichiers de microdonnées. Plusieurs descriptions de nos produits informatiques incluent le numéro de la personne-ressource à Statistique Canada. Vous obtenez donc une voie plus directe avec le service de votre choix.
- ☐ Comme toujours, le catalogue contient des sections concernant la façon d'obtenir de l'assistance, les recherches bibliographiques automatisées, les réductions offertes, le guide de commande et l'adresse de nos centres régionaux de consultation. Par ailleurs, vous serez heureux d'apprendre que, cette année, la couverture du catalogue est plastifiée pour résister à un usage fréquent.
- ☐ Pour obtenir rapidement la source d'information la plus complète qui soit concernant nos produits, procurez-vous le Catalogue de Statistique Canada (n° 11-204F au catalogue) au prix de 13,95 \$ au Canada, 17 \$ US aux États-Unis et 20 \$ US dans les autres pays. Pour commander votre exemplaire, écrivez à Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6, télécopiez votre commande au 1-613-951-1584 ou utilisez votre carte VISA ou MasterCard et composez le numéro sans frais :

Prix à la consommation et indices des prix

Juillet-septembre 1990

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Information and Current Analysis Unit,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9606) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Winnipeg	(983-4020)
Halifax	(426-5331)	Regina	(780-5405)
Montréal	(283-5725)	Edmonton	(495-3027)
Ottawa	(951-8116)	Calgary	(292-6717)
Toronto	(973-6586)	Vancouver	(666-3691)

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous diverses formes. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Sous-section de l'information et de l'analyse courante,
Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 951-9606) ou au centre de consultation de Statistique Canada à:

NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series in Tables in the publication. For further information on CANSIM call (613) 951-8200 or write Electronic Data Dissemination Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

This publication was prepared under the direction of:

- **Barbara J. Slater**, Director, Prices Division
- **J. Arthur Ridgeway**, Chief, Consumer Prices Section
- **Harold Harnarine**, Head, Information and Current Analysis Unit

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres non disponibles.

- néant ou zéro.
- nombres infimes.
- ^P nombres provisoires.
- ^r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 951-8200 ou écrire à, Division de la diffusion informatique des données, Statistique Canada, Immeuble R.H. Coats Building, Ottawa, K1A 0T6.

Highlights

CONSUMER PRICE BEHAVIOUR

Third Quarter, 1990

Trends in the All-items Index

Between June and September 1990 (third quarter), the All-items Consumer Price Index (CPI) for Canada advanced by 1.1% in seasonally adjusted terms. This change pointed to a noticeably faster advance in the general price level, compared to the 0.7% increase for the second quarter (March to June). The increase in the latest period was distributed somewhat evenly across each of the three months comprising the quarter.

In terms of other measures, the trend appeared to be contradictory. The unadjusted rise in the third quarter was 0.8%, marginally less than the increase of 0.9% reported for the second quarter. The average of 12-month rates for each quarter of 1990 indicated that these annual rates declined steadily from 5.4% in the first, 4.6% in the second and 4.2% in the third quarter.

Major Contributors to the Third Quarter Change

As stated above, the All-items index for Canada increased by 0.8% in unadjusted terms in the third quarter. Six of the seven major component indexes posted increases ranging from 0.7% in the Health and Personal Care index to 1.4% in the Transportation index, while the Food index fell by 0.4%. The major contributors to the upward pressure on the All-items index were, in rank order, from advances of 0.8% in the Housing index, 1.4% in the Transportation index and 2.3% in the Recreation, Reading and Education index.

The 0.8% rise in the Housing index reflected, to a large extent, gains made in the Rented Accommodation index (1.4%) and in the Owned Accommodation index (0.5%). The former contained the annual rent increases observed in the province of Québec in August. The latter reported large offsetting price movements in its elemental components. The upward pressures resulted from advances in mortgage interest costs (3.6%), home maintenance and repair charges (3.4%) and fuel oil prices (3.0%). A substantial proportion of the upward impact was offset by falling prices for new houses (-3.4%), piped gas (-4.7%) and homeowners' insurance coverage (-2.9%). A noticeable price jump (6.4%) was registered for hotel/motel accommodation charges, as rates reached their summer levels. Less significant price increases were also noted for child care services, pet food, detergent and soap, household textiles and selected household equipment.

Faits saillants

COMPORTEMENT DES PRIX À LA CONSOMMATION

Troisième trimestre, 1990

Tendances de l'indice d'ensemble

Entre juin et septembre 1990 (troisième trimestre), l'indice d'ensemble désaisonnalisé des prix à la consommation pour le Canada a progressé de 1.1%, ce qui indique une accélération nette du niveau général des prix, par rapport à la hausse de 0.7% affichée au deuxième trimestre (mars à juin). Au troisième, l'augmentation était répartie à peu près également sur chacun des trois mois.

Exprimée en d'autres mesures, la tendance paraît contradictoire. L'indice d'ensemble non désaisonnalisé a augmenté de 0.8% au troisième trimestre, soit un peu moins que la hausse de 0.9% déclarée au deuxième. La moyenne des taux sur 12 mois pour chaque trimestre de 1990 indique une diminution progressive de ces taux annuels, à savoir 5.4% au premier trimestre, 4.6% au deuxième et 4.2% au troisième.

Principaux facteurs de la variation au troisième trimestre

Comme on l'a noté plus haut, l'indice d'ensemble non désaisonnalisé s'est accru de 0.8% au troisième trimestre. Des sept principales composantes, six ont enregistré des hausses variant de 0.7% pour la santé et les soins personnels à 1.4% pour les transports, alors que l'indice des aliments a diminué de 0.4%. Les principaux facteurs ayant fait monter l'indice d'ensemble étaient, par ordre d'importance, les hausses de 0.8% pour l'habitation, de 1.4% pour les transports et de 2.3% pour les loisirs, la lecture et la formation.

La hausse de 0.8% de l'indice de l'habitation reflétait, en grande partie, la progression au titre du logement en location (1.4%) et du logement en propriété (0.5%). Cette variation comprenait, dans le premier cas, les hausses locatives annuelles observées en août au Québec et, dans l'autre, d'importants mouvements des composantes en sens inverse. La poussée à la hausse découlait du relèvement des intérêts hypothécaires (3.6%), des frais d'entretien et de réparation des maisons (3.4%), du gaz naturel (-4.7%) et des assurances à la charge du propriétaire (-2.9%). Les tarifs des chambres d'hôtels et de motels ont fait un bond évident (6.4%) au moment de l'entrée en vigueur des tarifs d'été. Des hausses de moindre importance ont aussi été signalées en ce qui concerne les services de soins d'enfants, les aliments pour animaux de maison, le détergent et le savon, les articles ménagers en matière textile et certains articles d'équipement ménager.

The rise of 1.4% in the Transportation index resulted from increases of 1.1% in the Private Transportation index and 4.0% in the Public Transportation index. In the former case, most of the increases were associated with a relatively sharp rise in gasoline prices and a noticeable advance in automobile insurance premiums. Gasoline prices were propelled rapidly upwards, as crude prices rose in response to the market uncertainties, following the political crisis in the Middle East, resulting from Iraq's invasion of Kuwait in early August. The sharp rise in auto insurance premiums was largely in response to a shift to the no-fault plan in Ontario, which came into effect in late June. Auto rental charges also rose as mid-summer rates peaked. In addition, increases were registered for tire prices and other maintenance and repair charges related to the private automobile. Much of the increase in the Public Transportation index was due to higher air fares resulting, in part, from normal seasonal increases and, in part, from higher fuel prices. A small proportion of the rise was also due to higher taxi fares in some cities.

The largest contribution to the 2.3% rise in the Recreation, Reading and Education index came from a 11.5% increase in the Education index. This resulted from annual increases in university tuition fees, which rose by 70.0% in Québec (the first rise in over twenty years) with increases ranging from 5.4% to 13.7% in other provinces. The Recreation index rose by 0.5%, as higher prices for video tapes and cablevision services were registered. In addition, the Reading index increased by 2.6%, as higher prices for newspapers, magazines and books were observed.

Increases in the Tobacco Products and Alcoholic Beverages index (1.2%), in the Clothing index (0.8%) and in the Health and Personal Care index (0.7%) each contributed modestly to the overall 0.8% rise in the All-items index in the third quarter. The rise in the first was attributable largely to higher prices of cigarettes and alcoholic beverages served in licensed premises. The Clothing index rose in response to higher prices for women's suits, dresses, blouses and jewellery, as well as for men's coats, jackets, suits and jewellery. Some dampening of the upward pressure resulted from lower prices for women's fur coats (weak demand) and jeans and men's pants. The rise in the Health and Personal Care index was traceable largely to higher prices for prescribed medicines and hair-grooming services.

The Food index fell by 0.4%, as a decline of 1.1% in the index of Food Purchased from Stores was only partly offset by a rise of 1.3% in the index for Food Purchased from Restaurants. A substantial proportion of the decline was caused by a drop of 25.6% in the Fresh Vegetables index. In the latter two months of the quarter increased supplies of domestic vegetables dampened the overall rise of the Fresh Vegetables index. The Fresh Fruit index also fell by 4.1%, mainly reflecting lower prices for citrus fruits. Further downward pressures resulted from lower average prices for beef and pork cuts. The fall in the index for Food Purchased from Stores was offset partially by higher prices observed for poultry, cured meat, prepared and ready-cooked meat, low fat milk, eggs and selected bakery products.

La hausse de 1.4% de l'indice des transport découlait de la progression de 1.1% pour le transport privé et de 4.0% pour le transport public. Dans le premier cas, les variations étaient pour la plupart liées à l'augmentation relativement brusque du prix de l'essence et à la hausse notable des primes d'assurance-automobile. La montée en flèche du prix de l'essence faisait suite à la hausse du prix du brut, qui traduisait les incertitudes du marché face à la crise politique entourant l'invasion du Koweït par l'Irak au début d'août. La brusque hausse des primes résultait surtout de l'adoption de l'assurance sans faute en Ontario, à la fin de juin. Les frais de location de voiture étaient en hausse, en raison du sommet atteint au milieu de l'été, tout comme le prix des pneus et d'autres frais d'entretien et de réparation de voitures privées. La progression de l'indice du transport public était surtout le fait du relèvement des tarifs aériens, qui s'expliquait en partie par les hausses saisonnières habituelles, en partie par la montée du prix du carburant et, en faible proportion, par l'augmentation des tarifs du taxi dans certaines villes.

La hausse de 2.3% de l'indice des loisirs, de la lecture et de la formation provenait principalement de la poussée de 11.5% au titre de l'éducation laquelle était occasionnée par la hausse de 70.0% des frais d'inscription dans les universités au Québec (la première à survenir depuis plus de vingt ans), comparativement à des hausses de 5.4% à 13.7% dans d'autres provinces. L'indice des loisirs a progressé de 0.5% par suite du relèvement des prix des bandes vidéo et des services de câblodistribution. L'indice de la lecture est monté de 2.6% du fait de la hausse du prix des journaux, des magazines et des livres.

La progression de l'indice des produits du tabac et des boissons alcoolisées (1.2%), de celui de l'habillement (0.8%) et de celui de la santé et des soins personnels (0.7%) a contribué de façon modeste à l'augmentation globale de 0.8% de l'indice d'ensemble au troisième trimestre. Dans le premier cas, la hausse était surtout attribuable à la montée du prix des cigarettes et des boissons alcoolisées servies dans les débits de boissons. L'indice de l'habillement a progressé par suite du relèvement du prix des tailleurs, robes, blouses et bijoux pour femmes et des manteaux, vestes, complets et bijoux pour hommes. La poussée à la hausse a été quelque peu ralentie par l'abaissement du prix des manteaux de fourrure pour femmes (faible demande) ainsi que des jeans et des pantalons pour hommes. La progression de l'indice de la santé et des soins personnels s'expliquait surtout par la montée du prix des médicaments sur ordonnance et des services de coiffeur.

L'indice des aliments a reculé de 0.4%, la baisse de 1.1% au titre des aliments achetés au magasin n'étant qu'annulée en partie par la hausse de 1.3% au titre des aliments achetés au restaurant. Le recul était causé principalement par une chute de 25.6% au titre des légumes frais. Pendant les deux derniers mois du trimestre, l'augmentation des approvisionnements en légumes pour consommation intérieure a ralenti la hausse globale de l'indice des légumes frais. La diminution de 4.1% de l'indice des fruits frais reflétait surtout l'abaissement du prix des agrumes. D'autres pressions à la baisse ont été exercées par le fléchissement du prix moyen des morceaux de bœuf et de porc. Le recul de l'indice des aliments achetés au magasin a été annulé en partie par la hausse des prix observés pour la volaille, la viande de salaison, les préparations à base de viande et les viandes cuites, le lait à basse teneur en gras, les oeufs et certains produits de boulangerie.

Introduction

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, The Consumer Price Index, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements. This is presented in the form of tabular and graphic information. Some tabular information on international prices is also presented, in particular for some Canada - U.S. comparisons.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Part IV of this report contains tables for the All-items and seven major components for each province.

Place-to-place comparative retail price information forms Part V of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials. Special feature articles, which are periodically included in the publication, are presented in Part VI.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 and 5 present background information relating to place-to-place retail price comparisons.

Introduction

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, L'indice des prix à la consommation, n° 62-001 au catalogue.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation. Ces informations sont présentées sous la forme de tableaux et de graphiques. Des tableaux comportant de l'information sur les prix internationaux sont également présentés, particulièrement en ce qui regarde certaines comparaisons entre le Canada et les É.-U.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagréé.

La partie IV de ce rapport contient des tableaux pour l'ensemble et les sept composantes principales pour chaque province.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie V de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes. Les articles spéciaux, qui font périodiquement partie de cette publication, se retrouvent à la partie VI.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthode des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 et 5 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

¹ Seasonal adjustment of the Consumer Price Index for Canada is undertaken separately for each of the seven major components of the CPI with the quarterly calculation being made before linking or chaining takes place. The resulting seven major component indexes as well as the All-items and All-items excluding Food aggregates are then "linked" or "chained" to form continuous series starting from January 1978. The seasonally adjusted monthly data are published without further revision until the year end, when revisions to any months data may be made from January 1985 forward (the start of the 1982 basket). These revisions are published with the January release.

¹ La désaisonnalisation de l'indice des prix à la consommation pour le Canada est effectuée séparément pour chacune des sept composantes principales de l'IPC. Les calculs sont faits avant de procéder à l'enchaînement. Les indices des sept composantes principales, d'ensemble et d'ensemble sans les aliments ainsi obtenus sont ensuite "enchaînés" pour déterminer les séries continues à partir de janvier 1978. Les données désaisonnalisées mensuelles sont publiées sans autre révision jusqu'à la fin de l'année où une révision peut être effectuée pour tout mois à compter de janvier 1985 (le début du panier de 1982). Ces révisions sont émis avec la publication de janvier.

Appendix 1

THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e., price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the **movement** of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for 26 cities are available at present in Part V of this publication. Inter-spatial indexes covering approximately two thirds of the CPI basket for a selected number of cities are also available in this section.

Coverage

Beginning with the December 1988 to January 1989 price change, the weights used in the Consumer Price Index are those pertaining to 1986 expenditure patterns. Data used for establishing these patterns were obtained through the 1986 Family Expenditure Surveys. The expenditure data represents the expenditures of all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1986 revealed 82 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 82 urban centres into 34 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

Separate CPI's are published for 18 of these centres which, together, accounted for approximately 75% of the total 1986 current consumption expenditures reported in the 82 centres. These 18 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 300 commodities are priced in each of these 18 cities while in the remaining 64 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

Appendice 1

L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le **mouvement** des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour 26 villes, à la Partie V de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

Champ d'observation

À compter de janvier 1989, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1986. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1986. Les données sur les dépenses représentent les dépenses de tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1986, 82 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 82 centres urbains en 34 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Des IPC distincts sont publiés pour 18 centres qui, ensemble, interviennent pour près de 75% du total des dépenses courantes de consommation déclarées en 1986 par les 82 centres. Les 18 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 300 produits dans chacune des 18 villes; ce nombre est plus faible dans les 64 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

The 1982 family expenditure patterns were used to compile the CPI from January 1985 to December 1988. In January 1989 the 1982 weights were replaced by those derived from the expenditure patterns of 1986. This updating continues the policy of updating on a four-year cycle.

Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

La composition des dépenses des familles de 1982 a servi au calcul de l'IPC à partir de janvier 1985 jusqu'à décembre 1988. En janvier 1989, les pondérations de 1982 ont été remplacées par d'autres dérivées de la composition des dépenses de 1986. Cette mise à jour poursuit la politique de Statistique Canada de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE II. Comparison of 1982 and 1986 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABLEAU EXPLICATIF II. Comparaison des pondérations des dépenses de 1982 et de 1986 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

Major components Composantes principales	Weights 1982 Pondérations 1982	Weights 1986 Pondérations 1986
All-items - Ensemble	100.00¹	100.00¹
Food - Aliments	20.02	18.05
Housing - Habitation	38.14	36.32
Clothing - Habillement	8.37	8.69
Transportation - Transports	15.75	18.29
Health and personal care - Santé et soins personnels	4.02	4.20
Recreation, reading and education - Loisirs, lecture et formation	8.25	8.84
Tobacco products and alcoholic beverages - Produits du tabac et boissons alcoolisées	5.45	5.60

¹ Figures may not add up due to rounding.

¹ Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

The weights shown in Text Table II represent expenditures in 1982 (1982 quantities valued in 1982 prices) and in 1986 (1986 quantities valued in 1986 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981=100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the:

Consumer Prices Section,
Prices Division, Statistics Canada,
Ottawa, Ontario,
K1A 0T6
(Telephone: (613) 951-9606).

The indexes based on 1986 weights were linked or connected in December 1988 to the appropriate indexes based on 1982 weights which had been in use since January 1985.

This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Les pondérations du tableau explicatif II représentent les dépenses en 1982 (quantités et prix de 1982) et en 1986 (quantités et prix de 1986). Elles ne peuvent servir à reconstruire ni à réagréger des indices sur la base de 1981=100. La méthode à suivre pour une telle reconstruction peut être obtenue sur demande auprès de la:

Section des prix à la consommation
Division des prix, Statistique Canada
Ottawa (Ontario)
K1A 0T6
(Téléphone: (613) 951-9606).

Les indices fondés sur les pondérations de 1986 ont été enchaînés ou raccordés en décembre 1988 aux indices correspondants fondés sur les pondérations de 1982, en usage depuis janvier 1985.

Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1986=100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1986=100 time base became effective with the release of the June 1990 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised periodically.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1981=100 or 1986=100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights. Furthermore, the method employed in converting to the 1986=100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1981 or 1986 time base series, the same is not true for changes measured in terms of index points.

Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 1 involves compounding the growth rate over the latest three-month period on the seasonally adjusted level (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", **Retail Prices and Living Costs** - Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

Reconstructed Indexes

With the release of the January 1985 Consumer Price Index, certain series were reconstructed historically to reflect the introduction of the Consumer Classification System of Statistics Canada which was introduced with the 1982 Updating. A few additional reconstructions were made with the introduction of the 1986 basket. For further information, contact Prices Division (613-951-9606 or 951-3353).

Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1986=100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1986=100 est devenue effective à partir de la diffusion de l'indice de juin 1990. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision périodiquement.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1981=100 et 1986=100 sont équivalentes, les petites différences étant attribuables à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base. De plus, la méthode de conversion selon la base 1986=100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1981 ou 1986) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 1 consiste à prendre un taux de croissance composé sur le niveau désaisonnalisé des trois derniers mois (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", **Prix de détail et coût de la vie** - Bulletin de service (n° 62-005 au catalogue), vol. 4, n° 4, avril 1975.

Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation de janvier 1985, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent l'introduction du système de classification de la consommation de Statistique Canada qui fut introduit avec la mise à jour de 1982. L'adoption du panier de 1986 a amené quelques autres remaniements. Pour plus de renseignements, communiquez avec la Division des prix (613-951-9606 ou 951-3353).

Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978, 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between 1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres **were not** included in the calculation of the official CPI for Canada. With the introduction of the 1982 Updating, these two centres were included in the calculation of the official CPI for Canada.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be used to represent that of owned accommodation. As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the sixteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two-month lag.

Provincial CPI's

Consumer price indexes for provincial urban centres were published for the first time in the July-September 1988 issue of this publication. An article describing the coverage and method of these indexes was published in the same issue. Updated Provincial CPI's are now a permanent feature of this publication.

Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in **The Consumer Price Index, Reference Paper, Updating Based on 1986 Expenditures**, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in *Family Expenditure in Canada, 1986*, Catalogue 62-555.

Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978, les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982 = 100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains **n'étaient pas** compris dans le calcul de l'IPC officiel pour le Canada. Avec l'introduction de la mise à jour de 1982, ces deux centres ont été pris en compte lors du calcul de l'IPC officiel pour le Canada.

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des seize autres centres urbains pour lesquels un IPC est calculé. Les données sur les loyers utilisées sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

IPC Provinciaux

Des indices de prix à la consommation pour les centres urbains provinciaux ont été publiés pour la première fois dans le numéro de juillet-septembre 1988 de la présente publication. Un article décrivant la couverture et la méthodologie de ces indices est paru dans ce même numéro. Les IPC provinciaux mis à jour sont devenus partie intégrante de la présente publication.

Renseignements supplémentaires et publications connexes

Le Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1986, (hors-série), n° 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans *Dépenses des familles au Canada, 1986*, n° 62-555 au catalogue.

The latest information on the Consumer Price Index for Canada and 18 cities is also available in the **Consumer Price Index**, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 (613-951-9606 or 613-951-3353).

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de 18 villes sont publiés dans le bulletin mensuel **L'indice des prix à la consommation**, n° 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont disponibles. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6 (613-951-9606 ou 613-951-3353).

Appendix 2

THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1986 and June 1990, consumer prices as measured by the CPI rose 19.2% such that, goods and services which could have been purchased for \$100.00 in 1986 would cost \$119.20 in June 1990. Each consumer dollar in June 1990 therefore buys less than in 1986. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in June 1990 compared to the 1986

$$\text{dollar was } 83.9 \text{ (100 cents } \times \frac{100.0}{119.2} = 83.9 \text{ cents).}$$

This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1986 dollar at different points in time (Table 2) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

Appendice 2

LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1986 et juin 1990, les prix à la consommation mesurés par l'IPC ont grimpé de 19.2% de sorte que les biens et services qu'on pouvait acheter en 1986 avec \$100.00 coûtaient \$119.20 en juin 1990. Chaque dollar de consommation en juin 1990 achète donc moins qu'en 1986. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en juin 1990, par rapport au dollar de 1986,

$$\text{s'établissait à } 83.9 \text{ cents (100 cents } \times \frac{100.0}{119.2} = 83.9 \text{ cents).}$$

Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1986 (tableau 2) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

Appendix 3

SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then falls back, subsequently to rise again. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement which reflects continuing or slowly changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

Appendice 3

LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, descend puis remonte à nouveau. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable qui reflète la continuité ou un changement lent de l'économie.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

The methodologies used for removing as much of the seasonal fluctuation as possible from a series have been described in detail in numerous articles and texts on the subject.¹ Rather than reiterating those texts, an outline of the methodologies employed in the derivation of seasonally adjusted consumer price indexes for Canada is provided below.

With the introduction of the 1982 basket, the seasonal adjustment methodology was changed. Direct seasonal adjustment is performed at the level of the seven major components with the seasonally adjusted All-items and All-items excluding Food indexes being the weighted average of their components. This indirect seasonal adjustment of the two aggregate series ensures (except for possible rounding differences) that the aggregate movements will be within the range of their components' movements. Since each basket has its own weights, the move to indirect seasonal adjustment of the aggregates dictated the use of unlinked series as the basis for the seasonal adjustment. Estimating a separate seasonal pattern for each basket has some conceptual advantages since it means that the classification and weight changes introduced with each updating of the basket will not distort the estimates. However, there is an operational difficulty which arises due to the desirability of having at least seven years of data for estimation of the seasonal pattern and the current rapidity with which CPI baskets are updated. Given the current updating cycle, at the time a new basket is introduced, we have only three years of data for the new basket. To create a longer time series, we chain on data from the previous basket back to its beginning. This reintroduces some of the distortions present in estimating seasonal patterns from linked data.

The above distortion will be minimized through the use of concurrent seasonal adjustment rather than forecast seasonal factors. With the concurrent methodology, the seasonal pattern is estimated each month using all available data. However, to minimize revisions we will revise past indexes only at the end of each calendar year.

¹ Shiskin, Julius and Harry Eisenpress, "Seasonal Adjustments by Electronic Computer Methods", Technical Paper 12, National Bureau of Economic Research, New York, 1958.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la question¹. Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avec l'introduction du panier 1982, la méthode de désaisonnalisation fut changée. La désaisonnalisation directe est effectuée à l'échelle des sept composantes principales; les versions désaisonnalisées de l'indice des aliments et de l'indice d'ensemble sans les aliments correspondent à la moyenne pondérée de leurs composantes. Cette désaisonnalisation indirecte des deux séries agrégées garantit que les mouvements agrégés se situeront dans les limites des mouvements de leurs composantes (exception faite des différences attribuables à l'arrondissement). Puisque chaque panier a ses propres coefficients de pondération, le passage à la méthode indirecte de désaisonnalisation des séries agrégées a entraîné l'utilisation, à titre de base de la désaisonnalisation, des séries non enchaînées. L'estimation de tendances saisonnières distinctes pour chacun des paniers représente certains avantages au point de vue conceptuel, puisqu'elle signifie que les changements apportés à la classification et aux coefficients de pondération au moment de la mise à jour du panier n'entraîneront aucune distortion. Toutefois, une difficulté opérationnelle existe étant donné, d'une part, qu'il est souhaitable d'avoir au moins sept années de données pour estimer la tendance saisonnière et, d'autre part, en raison de la rapidité avec laquelle on met maintenant à jour le panier de l'IPC. étant donné le cycle courant de mise-à-jour, nous n'avons que trois ans de données pour un nouveau panier lorsque celui-ci est introduit. Afin de créer une série plus longue, nous enchaînons les données du nouveau panier à celles du panier précédent jusqu'à son début. Cette mesure ramène certaines distorsions que l'on retrouvait dans l'estimation des tendances saisonnières des données enchaînées.

Ces distorsions seront toutefois minimisées par l'utilisation de désaisonnalisations concomitantes plutôt que de coefficients saisonniers projetés. Dans la méthodologie concomitante, la tendance saisonnière est estimée chaque mois au moyen de toutes les données accessibles. Nous ne recalculerons toutefois les indices antérieurs qu'à la fin de chaque année civile, et ce pour réduire au minimum le nombre de révisions.

¹ L'étude technique n° 12 de Julius Shiskin et de Harry Eisenpress "Seasonal Adjustments by Electronic Computer Methods", National Bureau of Economic Research, New York, 1958.

Appendix 4

CITY AVERAGE RETAIL PRICES

Introduction

The Average Retail Price Survey is under taken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally under taken during the first week of January, April, July and October.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

Calculation Methodology

City Prices. Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

Appendice 4

PRIX DE DÉTAIL MOYENS PAR VILLE

Introduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

Méthode de calcul

Prix urbains. Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas ces articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

Weighted city averages. A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey can be acquired by contacting Prices Division.

Average Retail Prices for Gasoline

Tables 16 through 21 present average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the 16 urban centres for which Consumer Price Indexes are produced and cover the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

Average Retail Prices for Fuel Oil

Table 22 presents average retail prices for fuel oil. The information is collected nine times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 22 are confined to 16 urban centres and for the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

Moyennes pondérées des villes. Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

Spécification des articles

Une description des quelques 60 articles contenus dans l'enquête des prix moyens peut être obtenu en communiquant avec la Division des prix.

Prix de détail moyens de l'essence

Les tableaux 16 à 21 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. Les séries présentées se limitent aux 16 centres urbains pour lesquels on produit un IPC pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

Prix de détail moyens du mazout

Le tableau 22 présente les prix de détail moyens du mazout. Cette information est relevée neuf fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 22 se limitent à 16 centres urbains, pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

Appendix 5

CANADIAN INTER-CITY RETAIL PRICE COMPARISONS

Table 22 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of commodities and services at the specified point in time.

The data base of this place-to-place study of comparative retail prices was largely drawn from the large volume of price quotations collected for the production of the monthly city consumer price indexes. For the inter-city food price differentials, however, use was also made of data gathered in a special program of pricing undertaken quarterly for publication of City Average Retail Prices.¹

In developing these spatial price relationships, efforts were made to achieve comparability by seeking to equate qualities of goods and services in the various locations and by matching types of retail outlets so far as possible. To optimize price comparability between locations, differential price measurements were initially derived separately as between the following pairs of cities:

- St. John's - Halifax
- Charlottetown - Halifax
- Saint John - Halifax
- Ottawa - Halifax
- Toronto - Montréal
- Ottawa - Toronto
- Toronto - Winnipeg
- Regina - Winnipeg
- Edmonton - Winnipeg
- Edmonton - Vancouver

Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names whenever possible and also with some regard for comparability of retail outlets and merchandising practises. By means of a linking procedure, the paired city item in dexes were initially compared with their counterparts in a common base city; subsequently they were related to the weighted average of the combined 11 cities equalling 100. The city-to-city price relationships for individual items thus derived were then aggregated by application of the combined 11-city CPI weighting patterns updated for price change to the time of the inter-city retail price comparison study. Measurements of inter-city retail price differentials are updated, as required, by application of the relative movement of item prices in each city, obtained from the relevant city CPI.

¹ See Table 14 and Appendix 4.

Appendice 5

COMPARAISONS ENTRE LES PRIX DE DÉTAIL DANS DIFFÉRENTES VILLES DU CANADA

Le tableau 22 présente les différences de prix à la consommation de 11 villes du Canada, situées dans les 10 provinces, pour un nombre choisi de biens et de services, pour la période de temps spécifiée.

Les données de cette étude comparative de prix de détail proviennent en grande partie du relevé de prix utilisé pour la production de l'indice mensuel des prix à la consommation. On a, toutefois, utilisé les données obtenues dans le cadre d'un programme trimestriel spécial de relevé des prix servant à la publication des prix de détail moyens par ville¹ pour déterminer les différences de prix de la nourriture entre les villes.

Des efforts ont été entrepris pour développer des comparaisons valables en cherchant à obtenir des qualités identiques de biens et de services dans les différents endroits et en couplant, lorsque possible, des points de vente au détail comparables, pour déterminer les relations de prix spatiales. Afin d'optimiser la comparaison des prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour les paires de villes suivantes:

- St. John's - Halifax
- Charlottetown - Halifax
- Saint John - Halifax
- Ottawa - Halifax
- Toronto - Montréal
- Ottawa - Toronto
- Toronto - Winnipeg
- Regina - Winnipeg
- Edmonton - Winnipeg
- Edmonton - Vancouver

À l'intérieur de chaque paire de villes, les prix ont été couplés au niveau de l'article en s'assurant que les spécifications étaient identiques, y compris les marques, lorsque c'était possible et aussi en tenant compte de la comparaison des points de vente au détail et des méthodes de vente. Grâce à la procédure de couplage, les indices couplés des villes ont d'abord été comparés au niveau de l'article et transformés sur la base d'une ville commune, ils ont ensuite été reliés à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Les relations entre les prix d'articles entre les villes ainsi déduites ont été regroupées en appliquant le schéma de pondération de l'IPC des 11 villes combinées, mis à jour par la variation de prix qui s'est effectuée jusqu'au moment de l'étude comparative des prix de détail entre les villes. Les mesures de comparaison des prix de détail entre villes sont mises à jour, lorsque nécessaire, en utilisant le mouvement des prix obtenu des IPC de chaque ville, au niveau de l'article.

¹ Voir tableau 14 et appendice 4.

It should be noted, especially in periods of volatile price movement, that city-to-city retail price relationships may be significantly affected by the timing and the relative rate of price change occurring in each location. Furthermore, since the retail prices used in this study are those faced by consumers, they include sales and excise taxes as applicable. Thus, comparative rates of provincial sales tax in effect in the various cities at the time of price comparison, as well as changes in the rate of incidence of such taxes, can be of importance in explaining inter-city price differentials for tax-affected items or groups of items.

Footnotes for Table 23

- (2) The weights shown are rounded 1986 weights as contained in the report **The Consumer Price Index Reference Paper, Updating Based on 1986 Expenditures** (Occasional), Catalogue 62-553. They are provided for illustration only; the weights actually used are combined cities weights with adjustments for price change since 1986.
- (3) Includes the following sub-groups: Condiments, spices and vinegar, sugar and sugar preparations, coffee and tea, fats and oils and other foods, food preparation materials and food preparations.

Il convient de noter, surtout dans une période de fluctuation des prix, que les relations entre les prix de détail d'une ville à l'autre peuvent varier de façon significative selon la période de relevé des prix et le taux relatif de variation des prix à chaque endroit. De plus, puisque les prix de détail utilisés pour cette étude sont ceux que les consommateurs doivent payer, les taxes de vente et d'accise y sont incluses. Donc, les taux comparatifs des taxes de vente provinciale effectives dans les diverses villes au temps de la comparaison, de même que le changement dans le taux ou l'incidence de ces taxes, peuvent être importantes pour expliquer les différences de prix entre les villes, des articles ou groupes d'articles taxables.

Notes pour le tableau 23

- (2) Les poids indiqués sont les poids arrondis pour 1986 figurant dans **Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1986** (hors-série, n° 62-553 au catalogue. Ils ne sont présentés qu'à titre documentaire; les poids utilisés en fait sont les poids des villes combinés rajustés en fonction des variations des prix observées depuis 1986.
- (3) Comprend les sous-groupes suivants: Condiments, épices et vinaigre, sucre et préparations à base de sucre, le café et le thé, les huiles et matières grasses et les autres aliments, ingrédients et préparations alimentaires.

Appendix 6

INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these items by means of benefits separate from those regulated by statistical means. Finally, government

Appendice 6

COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créés. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que

employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking an other complete survey.

statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources de données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistics Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la révision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada, telephone: (613) 951-0120.

Principal commodity group	Number of items priced (if available)
Food at home	104
Meals away from home	9
Household maintenance and services	11
Household supplies	8
Communications	3
Domestic help (depending on location)	2-8
Clothing and home furnishings	22
Transportation and automobile operation	22
Health and personal care	25
Reading and recreation	13
Tobacco and alcohol	12

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada, téléphone: (613) 951-0120.

Groupe principal de produits	Nombre d'articles dont le prix est relevé (lorsque disponibles)
Aliments consommés à la maison	104
Repas pris à l'extérieur	9
Entretien et services ménagers	11
Fournitures ménagères	8
Communication	3
Aide-domestique (dépendant de l'endroit)	2-8
Habillement et ameublement	22
Transports et utilisation de l'automobile	22

Lecture et loisirs	13
Tabacs et boissons alcoolisées	12

No other monthly report on the Canadian Economy has this much to offer

Canadian Economic Observer

The most extensive and timely information source for people who want objective facts and analysis on the Canadian Economy... every month.

Current economic conditions

Brief, "to the point" a current update summary of the economy's performance including trend analyses on employment, output, demand and the leading indicator.

Feature articles

In-depth research on current business and economic issues: business cycles, employment trends, personal savings, business investment plans and corporate concentration.

Statistical summary

Statistical tables, charts and graphs cover national accounts, output, demand, trade, labour and financial markets.

Regional analysis

Provincial breakdowns of key economic indicators.

International overview

Digest of economic performance of Canada's most important trading partners — Europe, Japan and the U.S.

Economic and statistical events

Each month, CEO also publishes a chronology of current events that will affect the economy, and information notes about new products from Statistics Canada.

Consult with an expert

The names and phone numbers of the most appropriate Statistics Canada contacts are provided with each data table in the statistical summary; not only can you read the data and the analysis, you can talk to the experts about it.

The Canadian Economic Observer

(Catalogue no. 11-010) is \$220 annually in Canada, US\$260 in the United States and US\$310 in other countries.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6 or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

For faster service, fax your order to 1-613-951-1584. Or call toll free at 1-800-267-6677 and use your VISA or MasterCard.

La seule publication à vous offrir autant d'information sur l'économie canadienne

L'Observateur économique canadien

La revue la plus complète et la plus à jour qui soit pour les gens qui désirent des renseignements objectifs et une analyse de l'économie canadienne... chaque mois.

Les conditions économiques actuelles

Résumé bref et incisif de l'actualité économique du mois, comportant l'analyse des tendances de l'emploi, de la production, de la demande et de l'indicateur avancé.

Les études spéciales

Recherche approfondie sur les questions du domaine des affaires et de l'économie : cycles économiques, tendances de l'emploi, épargne personnelle, projets d'investissement et concentration des sociétés.

L'aperçu statistique

Tableaux, graphiques et diagrammes englobant les statistiques des comptes nationaux, de la production, de la demande, du commerce, de l'emploi et des marchés financiers.

L'analyse régionale

Ventilation par province des indicateurs économiques stratégiques.

Le survol de l'économie internationale

Un sommaire du rendement de l'économie des partenaires commerciaux du Canada, comme l'Europe, le Japon et les États-Unis.

Événements économiques et statistiques

Chaque mois, L'OEC publie une chronologie des événements qui influenceront l'économie de même que des renseignements sur les nouveaux produits de Statistique Canada.

Consultez un expert

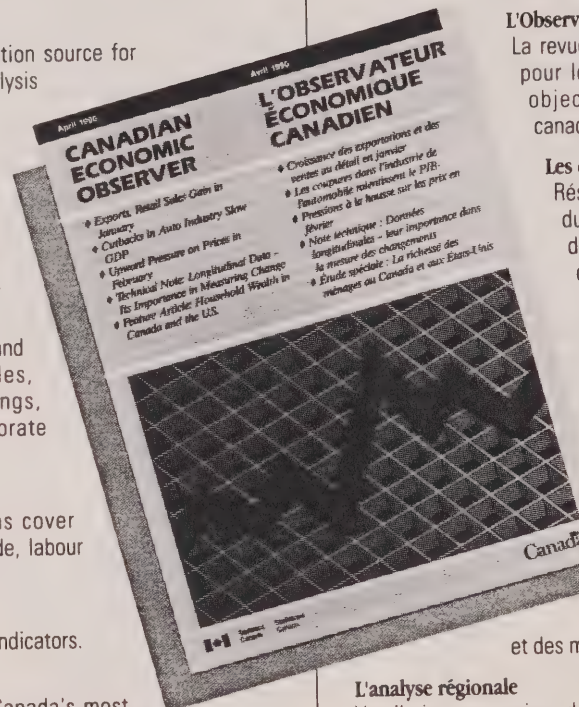

Les noms et numéros de téléphone des personnes-ressources figurent à chaque tableau de l'aperçu statistique; non seulement pouvez-vous lire les données et l'analyse, mais vous pouvez de plus discuter du sujet avec les experts de Statistique Canada.

L'Observateur économique canadien.

(n° 11-010 au catalogue) coûte 220 \$ l'abonnement annuel au Canada, 260 \$ US aux États-Unis et 310 \$ US dans les autres pays.

How long would it take you to get 10,000 price quotes from 3,500 companies?

A lot longer than it takes to open a copy of **Industry Price Indexes**. Subscribe now, for the most extensive data available on Canadian manufacturing selling prices.

Industry Price Indexes are indispensable if you need current, consistent and reliable reports on price fluctuations at the Canadian factory gate. Uses include preparing escalation contracts, inventory management, charting trends, forecasting price changes or compiling data to create your own index.

This monthly publication covers raw materials, energy and over 700 commodities by 20 major groups. Items listed range from fish fillets to industrial furnaces, cattle to crude oil. Most commodities are reported at the national level, but some are given on a regional basis.

Each issue also provides a historical perspective, with tables of annual averages and monthly price indexes of commodities for the past five years.

As the only periodical of this scope and detail **Industry Price Indexes** is the recognized authority on changes in the selling prices of Canadian manufactured goods.

Get the facts.

A subscription to the monthly **Industry Price Indexes** (Catalogue No. 62-011) is \$182 in Canada, US\$218 in the United States and US\$255 in other countries.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

Combien de temps vous faudrait-il pour obtenir 10 000 propositions de prix de 3 500 compagnies ?

Beaucoup plus de temps qu'il n'en faut pour lire un exemplaire d'**Indices des prix de l'industrie**. Abonnez-vous dès maintenant afin d'avoir accès aux données les plus complètes possible sur les prix de vente des manufacturiers canadiens.

Indices des prix de l'industrie est indispensable si vous avez besoin de rapports à jour, uniformes et fiables au sujet des fluctuations des prix à la production au Canada. Ces indices peuvent servir notamment à préparer des contrats d'indexation, à gérer des stocks, à suivre des tendances au moyen de graphiques, à prévoir des fluctuations de prix ou à compiler des données pour concevoir votre propre indice.

Cette publication mensuelle porte sur les matières premières, l'énergie et plus de 700 produits classés dans 20 grandes catégories. Les articles répertoriés vont des filets de poisson aux fours industriels en passant par les bovins et le pétrole brut. Pour la plupart des produits, les statistiques ont une portée nationale; toutefois, pour certains, elles revêtent un caractère régional.

Chaque numéro donne également une perspective historique; des tableaux indiquent les moyennes annuelles et les indices des prix mensuels des produits au cours des cinq dernières années.

Indices des prix de l'industrie est le seul périodique aussi complet et détaillé. Il fait autorité en ce qui touche les fluctuations des prix de vente des marchandises fabriquées au Canada.

Abonnez-vous !

L'abonnement au mensuel **Indices des prix de l'industrie** (n° 62-011 au catalogue) coûte 182 \$ au Canada, 218 \$ US aux États-Unis et 255 \$ US dans les autres pays.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6 ou communiquer avec le Centre régional de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

What happened to the cost of living last month?

The **Consumer Price Index** will tell you.

Whether you negotiate wage settlements, administer COLA clauses in labour contracts, assess government policies or are involved in renewal contracts, child support or alimony payments, you need current and detailed information on changes in the cost of living.

Compiled monthly (and published within 20 days of the month's end), **The Consumer Price Index** gives you a precise account of the latest fluctuations in consumer prices.

This monthly publication covers:

- transportation
- health and personal care
- food
- recreation, reading and education
- clothing
- tobacco products and alcoholic beverages
- housing

Over 400 items, ranging from milk to parking, household furnishings to reading material, are included.

Price indexes are presented nationally and for 18 major Canadian cities. In each issue you receive month-to-month percentage comparisons and trends over the last five years. And each issue analyzes the main causes of change.

Get the facts.

Subscribe to **The Consumer Price Index** (Catalogue No. 62-001) for the authoritative measure of the purchasing power of the Canadian consumer dollar. A subscription to this monthly is available for \$93 in Canada, US\$112 in the United States and US\$130 in other countries.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

Qu'en était-il du coût de la vie le mois dernier ?

L'indice des prix à la consommation répond à votre question.

Que vous ayez à négocier des règlements salariaux, à administrer des clauses d'indemnité de vie chère ou à évaluer des politiques gouvernementales, que vous vous occupiez du renouvellement de contrats, de pensions alimentaires ou d'allocations d'entretien, vous avez besoin de données récentes et détaillées sur les fluctuations du coût de la vie.

Établi mensuellement, et publié dans les 20 jours suivant la fin de chaque mois, **L'indice des prix à la consommation** vous renseigne de façon précise sur les plus récentes fluctuations des prix à la consommation.

Cette publication mensuelle porte sur:

- l'alimentation
- l'habillement
- l'habitation
- le transport
- la santé et les soins personnels
- les loisirs, la lecture et la formation
- les produits du tabac et les boissons alcoolisées

Plus de 400 articles sont inclus, allant du lait au stationnement en passant par l'ameublement de maison et le matériel de lecture.

Les indices de prix sont donnés pour l'ensemble du pays et 18 principales villes canadiennes. Chaque numéro présente des comparaisons des pourcentages mois après mois et les tendances au cours des cinq dernières années. En outre, chaque numéro analyse les principales causes de changement.

Abonnez-vous !

L'indice des prix à la consommation (n° 62-001 au catalogue) vous permet d'obtenir une évaluation fiable du pouvoir d'achat du dollar canadien. L'abonnement à cette publication mensuelle coûte 93 \$ au Canada, 112 \$ US aux États-Unis et 130 \$ US dans les autres pays.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6 ou communiquer avec le Centre régional de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and the listed documents should be directed to:

Information and Current Analysis Unit,
Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9606)
or to the Statistics Canada reference centre in:

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous diverses formes. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordiolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- ^P preliminary figures.
- ^r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series in Tables in the publication. For further information on CANSIM call (613) 951-8200 or write Electronic Data Dissemination Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 0T6.

This publication was prepared under the direction of:

- **J. Arthur Ridgeway**, Assistant Director, Prices Division
- **Margaret Parlor**, Chief, Consumer Prices Section
- **Harold Harnarine**, Head, Information and Current Analysis Unit

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences - Permanence of Paper for Printed Library Materials, ANSI Z39.48 - 1984.

Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres non disponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- ^P nombres provisoires.
- ^r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 951-8200 ou écrire à, Division de la diffusion informatique des données, Statistique Canada, Immeuble R.H. Coats Building, Ottawa, K1A 0T6.

Cette publication a été rédigée sous la direction de:

- **J. Arthur Ridgeway**, Directeur adjoint, Division des prix
- **Margaret Parlor**, Chef, Section des prix à la consommation
- **Harold Harnarine**, Chef, Sous-section de l'information et de l'analyse courante

Le papier utilisé dans la présente publication répond aux exigences minimales de l'"American National Standard for Information Sciences" - "Permanence of Paper for Printed Library Materials", ANSI Z39.48 - 1984.

Highlights

CONSUMER PRICE BEHAVIOUR

Fourth Quarter, 1990

Trends in the All-items Index

Between September and December 1990 (fourth quarter), the All-items Consumer Price Index (CPI) for Canada rose by 1.2% in seasonally adjusted terms. This was marginally higher than the 1.1% increase reported for the period June to September (third quarter). The increase in the latest quarter was concentrated largely in the months of October and November.

In unadjusted terms, however, the All-items index advanced by 1.3% in the fourth quarter, up sharply from the 0.8% increase observed in the third quarter. The average of 12-month rates for the three months of the fourth quarter, was 4.9%. This reversed the recent trend observed in such annual rates of increase which had declined steadily from 5.4% in the first quarter, to 4.6% in the second quarter and 4.2% in the third.

Major Contributors to the Fourth Quarter Change

As indicated above, the All-items index for Canada advanced by 1.3% in unadjusted terms in the fourth quarter. Six of the seven major component indexes registered increases ranging from 0.2% in Food to 4.1% in Transportation. A fall of 0.8% in the Clothing index partly offset these increases. The major contributors to the upward pressure on the All-items index resulted from the large increase in the Transportation index followed by an increase of 1.0% in the Housing index.

The 4.1% rise in the Transportation index was comprised of advances of 4.0% in the Private Transportation component and 4.9% in the Public Transportation component. In Private Transportation, much of the rise was explained by an average increase of 10.8% in gasoline prices and 3.3% in the prices of 1991-model automobiles compared to their 1990 counterparts. Gasoline prices rose throughout the fourth quarter reflecting the continuing uncertainty associated with the Persian Gulf crisis. In particular, the rise of 7.3% in October was the largest monthly increase in gasoline prices in over five years. By December, however, some evidence of downward pressures appeared in this market as several cities of Ontario, Alberta and British Columbia reported a fall in gasoline prices. Prices of the 1990-model vehicles were weak for a large part of the year. In spite of the increase of 3.3% associated with the 1991-model vehicles in the fourth quarter, the annual rise in new car prices was the lowest in over two decades. Small increases were also observed in automobile insurance premiums. The rise of 1.4% in the Public Transportation index was attributable largely to a 10.5% rise in air fares. Part of this increase was associated with higher prices of aviation fuel.

Faits saillants

COMPORTEMENT DES PRIX À LA CONSOMMATION

Quatrième trimestre, 1990

Tendances de l'indice d'ensemble

Entre septembre et décembre 1990 (quatrième trimestre), l'indice d'ensemble désaisonnalisé des prix à la consommation (IPC) au Canada a augmenté de 1.2%, ce qui représente une faible croissance par rapport à la hausse de 1.1% observée pour la période allant de juin à septembre (troisième trimestre). L'augmentation enregistrée au dernier trimestre est survenue surtout pendant les mois d'octobre et de novembre.

L'indice d'ensemble non désaisonnalisé a progressé de 1.3% au quatrième trimestre, en hausse marquée par rapport à l'augmentation de 0.8% observée au troisième trimestre. La moyenne des taux sur douze mois pour les trois mois du quatrième trimestre a été de 4.9%. Cela a renversé la tendance observée au niveau des taux annuels qui ont diminué progressivement pour passer de 5.4% au premier trimestre à 4.6% au deuxième trimestre et à 4.2% au troisième trimestre.

Principaux facteurs de la variation au quatrième trimestre

Comme on l'a mentionné plus haut, l'indice d'ensemble non désaisonnalisé s'est accru de 1.3% au quatrième trimestre. Sur les sept principales composantes, six ont enregistré une croissance variant entre 0.2% pour les aliments et 4.1% pour les transports. La diminution de 0.8% de l'indice de l'habillement a en partie atténué ces croissances. La hausse de l'indice d'ensemble est surtout attribuable à la forte progression de l'indice des transports, suivie de celle de 1.0% de l'indice de l'habitation.

Le bond de 4.1% de l'indice des transports était attribuable à des augmentations de 4.0% de la composante du transport privé et de 4.9% de celle du transport public. Au niveau du transport privé, la hausse est surtout attribuée à l'augmentation moyenne de 10.8% des prix de l'essence et de 3.3% des prix des automobiles de 1991 par rapport à celles de 1990. Les prix de l'essence ont continué de progresser pendant le quatrième trimestre, ce qui traduit le constant climat d'incertitude lié à la crise dans le golfe Persique. Plus particulièrement, la hausse de 7.3% observée en octobre a constitué la hausse mensuelle la plus élevée des prix de l'essence depuis cinq ans. En décembre, on observait déjà une tendance à la baisse, plusieurs villes de l'Ontario, de l'Alberta et de la Colombie-Britannique ayant déclaré une chute des prix de l'essence. Les prix des automobiles de modèle 1990 ont été faibles pendant une bonne partie de l'année. Malgré l'augmentation de 3.3% au niveau des automobiles de modèle 1991 au cours du quatrième trimestre, la hausse annuelle des prix des nouvelles automobiles a été la moins élevée en deux décennies. On a observé par ailleurs de faibles croissances au niveau des primes d'assurance-automobile. La progression de 1.4% de l'indice du transport public a été largement attribuable à la hausse de 10.5% des tarifs aériens. Une partie de cette progression a résulté d'une augmentation des prix du carburant dans le secteur du transport aérien.

Most of the 1.0% rise in the Housing index resulted from higher charges for owned and rented accommodation and increased fuel oil prices. The Owned Accommodation index advanced by 1.6% mainly due to increases of 8.5% in property taxes and 2.4% in mortgage interest costs. At the same time a considerable downward pressure in homeownership costs resulted from a fall of 3.3% in new house prices. Some moderation also resulted from lower homeowners' maintenance and repair charges and a decline in insurance premiums. Fuel oil prices rose by 25.7% in the quarter. Further upward pressures on the Housing index resulted from higher prices for natural gas, child care services and selected household appliances. The overall rise in the Housing index was offset to a large extent by seasonal declines in hotel/motel rates and a drop in long distance telephone charges. Further price declines were noted for wooden furniture, household textiles, and tableware and flatware.

The Recreation, Reading and Education index climbed by 1.2% and contributed moderately to the overall rise in the CPI. Most of the increase was associated with a 17.7% price rise for theatre tickets. In addition, price increases were registered for several daily newspapers and for music lessons.

Increases in the Tobacco Products and Alcoholic Beverages index (1.2%), and in the Health and Personal Care index (0.8%) contributed marginally to the overall 0.8% rise in the CPI. In the first case, cigarette prices rose by 1.5% while the prices of alcoholic beverages, mainly for beer and wine, were up by 0.9%. In the second case, the contributions originated mainly from higher prices for non-prescribed medicines, personal care supplies and hair-grooming services.

The Food index rose by 0.2%, as the index for Food Purchased from Restaurants advanced by 1.4% while the index for Food Purchased from Stores fell by 0.3%. The fall in the latter component was largely associated with lower prices for fresh fruit, concentrated fruit juices, turkey and sugar. Upward pressure emerged from higher prices mostly for fresh vegetables, beef, prepared and ready cooked meat, and selected dairy and bakery products.

The 1.3% rise in the All-items index was dampened to a moderate extent by a decline of 0.8% in the Clothing index. Much of the weakness in Clothing was concentrated in the index for Women's Wear (down 2.0%) and Girls' Wear (down 0.8%). In contrast the Men's Wear index remained unchanged while the Boys' Wear index rose by 3.2%. In addition, laundering and dry cleaning charges rose by an average of 1.3%.

La plus grande partie de la hausse de 1.0% de l'indice de l'habitation a été attribuée à la croissance des frais au titre des logements en location et en propriété et de celle des prix du mazout. L'indice des logements en propriété s'est accru de 1.6% en raison, surtout, de l'augmentation de 8.5% des impôts fonciers et de 2.4% des intérêts hypothécaires. Au même moment, une forte tendance à la baisse du coût des propriétés a découlé d'une chute de 3.3% des prix des nouvelles maisons. On a observé une certaine modération attribuable à la régression des frais d'entretien et de réparations à la charge des propriétaires et des primes d'assurance. Les prix du mazout ont progressé de 25.7% au cours du trimestre. L'indice de l'habitation a par ailleurs continué d'augmenter suite à la hausse des prix du gaz naturel, des services de soins d'enfants et de certains appareils ménagers. La croissance globale de l'indice de l'habitation a été atténuée en grande partie par des baisses saisonnières des tarifs des chambres d'hôtels et de motels et par une diminution des frais d'appels interurbains. On a observé d'autres baisses au niveau des meubles en bois, des articles ménagers en matière textile, des couverts et des articles de table.

L'indice des loisirs, de la lecture et de la formation a bondi de 1.2% et a contribué de façon modérée à la hausse globale de l'IPC qui a été en plus grande partie attribuable à la croissance de 17.7% des prix des billets de salles de cinéma. De plus, on a observé une augmentation des prix des quotidiens et des leçons de musique.

Les hausses de l'indice des produits du tabac et des boissons alcoolisées (1.2%) et de celui des soins de santé et des soins personnels (0.8%) expliquent en grande partie la croissance globale de 0.8% de l'IPC. Dans le premier cas, le prix des cigarettes a progressé de 1.5% et celui des boissons alcoolisées, plus particulièrement du vin et de la bière, de 0.9%. Dans le deuxième cas, les hausses ont été attribuées à l'augmentation des prix des produits grand public, des produits de soins personnels et des services de coiffeur.

L'indice des aliments a progressé de 0.2%, la baisse de 0.3% des aliments achetés au magasin ayant atténué la hausse de 1.4% de l'indice des aliments achetés au restaurant. La baisse observée s'explique en grande partie par la régression des prix des fruits frais, des jus de fruits concentrés, de la dinde et du sucre. On a observé une tendance à la hausse à la suite de la croissance, surtout, des prix des fruits frais, du boeuf, des préparations à base de viandes et des viandes cuites, et de certains produits laitiers et de boulangerie.

La montée de 1.3% de l'indice d'ensemble a été modérément atténuée par une chute de 0.8% de l'indice de l'habillement, plus particulièrement des indices des vêtements pour femmes (-2.0%) et des vêtements pour filles (-0.8%). Par contre, l'indice des vêtements pour hommes est demeuré inchangé, tandis que celui des vêtements pour garçons a progressé de 3.2%. De plus, les frais de blanchissage et de nettoyage à sec se sont accrus de 1.3% en moyenne.

Introduction

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, The Consumer Price Index, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements. This is presented in the form of tabular and graphic information. Some tabular information on international prices is also presented, in particular for some Canada - U.S. comparisons.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Part IV of this report contains tables for the All-items and seven major components for each province.

Place-to-place comparative retail price information forms Part V of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials. Special feature articles, which are periodically included in the publication, are presented in Part VI.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 and 5 present background information relating to place-to-place retail price comparisons.

Introduction

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, L'indice des prix à la consommation, n° 62-001 au catalogue.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation. Ces informations sont présentées sous la forme de tableaux et de graphiques. Des tableaux comportant de l'information sur les prix internationaux sont également présentés, particulièrement en ce qui regarde certaines comparaisons entre le Canada et les É.-U.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagréé.

La partie IV de ce rapport contient des tableaux pour l'ensemble et les sept composantes principales pour chaque province.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie V de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes. Les articles spéciaux, qui font périodiquement partie de cette publication, se retrouvent à la partie VI.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthode des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 et 5 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

¹ Seasonal adjustment of the Consumer Price Index for Canada is undertaken separately for each of the seven major components of the CPI with the quarterly calculation being made before linking or chaining takes place. The resulting seven major component indexes as well as the All-items and All-items excluding Food aggregates are then "linked" or "chained" to form continuous series starting from January 1978. The seasonally adjusted monthly data are published without further revision until the year end, when revisions to any months data may be made from January 1985 forward (the start of the 1982 basket). These revisions are published with the January release.

¹ La désaisonnalisation de l'indice des prix à la consommation pour le Canada est effectuée séparément pour chacune des sept composantes principales de l'IPC. Les calculs sont faits avant de procéder à l'enchaînement. Les indices des sept composantes principales, d'ensemble et d'ensemble sans les aliments ainsi obtenus sont ensuite "enchaînés" pour déterminer les séries continues à partir de janvier 1978. Les données désaisonnalisées mensuelles sont publiées sans autre révision jusqu'à la fin de l'année où une révision peut être effectuée pour tout mois à compter de janvier 1985 (le début du panier de 1982). Ces révisions sont émis avec la publication de janvier.

Consumer Prices and Price Indexes

Prix à la consommation et indices des prix

NOTE TO USERS

AVIS AUX UTILISATEURS

With the conversion of the Consumer Price Index series to a 1986=100 time base in July 1990, there was a slight change in the rounding procedure. This change has resulted in a few cases where the annual average index levels published in the previous two issues of this Catalogue are different from those published in this issue by 0.1. In the rare case where such differences are noted, readers are advised to treat the annual average indexes published in this issue as final and correct.

Par suite de la conversion de la série de l'indice des prix à la consommation à la base 1986=100 en juillet 1990, la règle à observer pour arrondir les nombres a été modifiée légèrement. La modification a eu pour effet que, dans quelques cas, les niveaux d'indice moyens annuels publiés dans les deux numéros précédents du Catalogue diffèrent de 0.1 de ceux qui paraissent dans le présent numéro. Les rares fois où survient une telle différence, le lecteur doit considérer comme finals et corrects les indices moyens annuels publiés dans le présent numéro.

THE CONSUMER PRICE INDEX IN 1990¹

(a) Introduction

The All-items Consumer Price Index for Canada increased by 4.8% in 1990, slightly less than the rise of 5.0% registered in 1989. The rate of increase in the last two years was, however, above the average annual rise of 4.2% for the previous five years, 1984 to 1988 inclusive.

The aim of this article is to review some of the factors contributing to the overall rate of price change in the last two years. In addition, the article examines the price behaviour of selected groups of components and individual commodities whose rates of price change were significantly different from that of the All-items index in 1990.

(b) The Macro Economic Setting

In 1990, the Canadian economy went into a recession. Evidence of slower economic growth appeared in 1989 when the Gross Domestic Product (GDP) grew by 3.0% in real terms, following a 4.4% annual rate of increase in 1988. After increasing in the first quarter of 1990, the GDP declined in the second, third and fourth quarters.

A slowdown in consumer spending had a moderating effect on the overall rate of price change. In 1989, growth in personal consumer expenditures slowed to 2.5% from the relatively rapid growth of 8.2% and 6.5% in 1987 and 1988 respectively. In the second quarter of 1990, consumer spending fell by an annual rate of 1.6%. The fall was associated with declines of 14.0% in the purchase of durable goods and 5.2% in semi-durable goods. By contrast spending on non-durable goods and services rose in that period. The second quarter also witnessed large declines in the expenditures on residential construction and on machinery and equipment, both of which had important secondary effects on consumer spending.

The weakness in the markets for durable and semi-durable goods continued into the third quarter of 1990. The motor-vehicle industry was particularly affected resulting in significant price weakening. In 1989, retail sales of motor-vehicles fell by 5.2%; in 1990, the number of units sold fell by a further 11.8%.

A loss of consumer confidence and the associated drop in consumer demand were partly related to the rise in unemployment. In December 1989, the unemployment rate stood at 7.5%, but by December 1990 the rate had risen to 9.3%. The Help-Wanted index, a measure of job vacancies in the economy, fell continuously in 1990.

L'INDICE DES PRIX À LA CONSOMMATION EN 1990¹

(a) Introduction

L'indice d'ensemble des prix à la consommation du Canada a augmenté de 4.8% en 1990, cette hausse étant légèrement inférieure à celle de 5.0% enregistrée en 1989. Toutefois, au cours des deux dernières années, le taux de progression était supérieur à l'augmentation annuelle moyenne de 4.2% des cinq dernières années, soit de 1984 à 1988 inclusivement.

Le présent document vise à analyser certains facteurs qui ont influé sur le taux global de variation des prix au cours des deux dernières années. En outre, il étudie le comportement des prix de certains groupes de composantes et de produits individuels dont le taux de variation s'écartait considérablement de celui de l'indice d'ensemble de 1990.

(b) Le contexte macro-économique

En 1990, l'économie canadienne est entrée dans une période de récession. Le ralentissement de la croissance économique s'est manifesté en 1989, alors que le produit intérieur brut (PIB) s'est accru de 3.0% en chiffres absolus, après avoir atteint, en 1988, un taux de progression annuel de 4.4%. Après avoir augmenté au premier trimestre de 1990, le PIB a diminué aux deuxième, troisième et quatrième trimestres.

La réduction des dépenses des consommateurs a exercé un effet modérateur sur le taux global de variation des prix. En 1989, les dépenses personnelles des consommateurs ne s'étaient accrues que de 2.5% alors qu'elles avaient augmenté assez rapidement au rythme de 8.2% et de 6.5% en 1987 et en 1988 respectivement. Au deuxième trimestre de 1990, les dépenses des consommateurs ont diminué au rythme annuel de 1.6%. Ce recul s'explique par les baisses respectives de 14.0% et de 5.2% au chapitre de l'achat des biens durables et semi-durables. Par ailleurs, les dépenses consacrées à l'achat de biens non durables et de services ont augmenté au cours de cette période. On observe en outre au deuxième trimestre un important fléchissement des dépenses au titre de la construction résidentielle et des machines et de l'équipement, qui a eu d'importants effets secondaires sur les dépenses des consommateurs.

Les marchés des biens durables et semi-durables ont continué d'être faibles au troisième trimestre de 1990. L'industrie automobile a été particulièrement touchée, d'où une diminution considérable des prix. En 1989, les ventes au détail de véhicules automobiles ont baissé de 5.2%; en 1990, le nombre de véhicules automobiles vendus a encore reculé de 11.8%.

La baisse de confiance des consommateurs et la diminution de la demande qui s'ensuit sont en partie liées à l'accroissement du chômage. En décembre 1989, le taux de chômage s'établissait à 7.5% et, un an plus tard, à 9.3%. L'indice de l'offre d'emploi, qui mesure les emplois vacants dans l'économie, n'a pas cessé de diminuer en 1990.

¹ This article was written by Harold Harnarine, Head, Information and Current Analysis Unit, Prices Division.

¹ Cet article a été rédigé par Harold Harnarine, Chef, Unité de l'information et de l'analyse courante.

Incentives to increase business investment and employment were hampered by the decline in total demand. Capacity utilization rates in manufacturing industries fell, on average, from 84.2% in the third quarter 1989 to 80.0% in the third quarter 1990. The under-utilized capacity was particularly evident in the rubber and plastics, textiles, paper and allied products, printing and publishing, wood, furniture and primary metals industries. Business pessimism was further re-inforced by a decline in corporate profits before taxes of 4.5% in 1989. The fall in profits continued into the third quarter of 1990. This outlook was further aggravated by a 34% increase in business bankruptcies, from 8,314 in 1989 to 11,180 in 1990.

The costs of production, which feed into the prices of consumer goods and services, also reflected the general economic weakness. There were two exceptions : the rise in the prices of crude petroleum and petroleum products and the increase in wages.

The prices of raw materials fell in 1988 but rose by 3.3% in 1989 and 4.3% in 1990. Crude mineral oil prices fell 21.8% in 1988 adjusting to a regime of over-supply, rose 14.5% in 1989, but then rose by 21.8% in 1990. Virtually all the increase in 1990 occurred in the last four months of the year. Farm input prices rose by a slight 1.5% in 1990 after climbing by 4.1% the year before. Declining rates of increase were also observed in the factory gate prices of domestically manufactured goods. According to the Industrial Product Price index, prices of such goods were up 4.3% in 1988, 2.1% in 1989 and 0.3% in 1990.

The trend in wage increases was different. The compounded average annual increase in basic wages, exclusive of COLA provisions, increased by 4.4% in 1988 and 5.3% in 1989, and by August 1990 was up by 6.6%. In manufacturing industries, however, wage settlements have risen at a slower rate since the second quarter of 1989. Wage increases lagged behind the increase in the CPI between 1983 and 1987. Since 1988, however, the trend has been for wages to exceed the annual increase in the CPI.

Monetary and credit conditions started to become increasingly stringent in 1987 when the Bank Rate stood at an average of 8.4%. The Bank Rate rose to a peak of 14.05% in May 1990 with the accompanying chartered banks' prime rate reaching 14.75%. Since then, the Bank Rate followed a declining trend and by December 1990, it had fallen to 11.78%.

Les incitations à accroître les investissements des entreprises et l'emploi ont été contrées par la baisse de la demande globale. En moyenne, les taux d'utilisation de la capacité dans le secteur de la fabrication ont diminué, passant de 84.2% au troisième trimestre de 1989 à 80.0% au troisième trimestre de 1990. La sous-utilisation de la capacité a été particulièrement manifeste dans le secteur du caoutchouc et des plastiques, des textiles, du papier et des produits connexes, de l'impression et de la publication, du bois, de l'ameublement et des industries de première transformation des métaux. La diminution de 4.5% des bénéfices des sociétés avant imposition en 1989 a d'autant plus renforcé le pessimisme des entreprises. Les bénéfices ont continué de fléchir au troisième trimestre de 1990. La hausse de 34% des faillites d'entreprises, qui sont passées de 8,314 en 1989 à 11,180 en 1990, a encore aggravé la situation.

Les coûts de production, qui sont incorporés aux prix des biens de consommation et des services, traduisaient également la faiblesse économique générale. Il y a toutefois deux exceptions à cette règle: l'accroissement du prix du pétrole brut et des produits du pétrole, et l'augmentation des salaires.

Les prix des matériaux bruts ont diminué en 1988 mais ils ont augmenté de 3.3% en 1989 et de 4.3% en 1990. Le prix de l'huile minérale brute a reculé de 21.8% en 1988 compte tenu de l'excédent des stocks, mais il a progressé de 14.5% en 1989 et de 21.8% en 1990. La hausse de 1990 est presque entièrement survenue pendant les quatre derniers mois de l'année. Les prix des intrants agricoles ont subi une légère augmentation de 1.5% en 1990 après avoir progressé de 4.1% l'année précédente. On a également observé un ralentissement des taux de croissance des prix des biens fabriqués au pays à leur sortie de l'usine. Selon l'indice des prix des produits industriels, les prix de ces biens se sont accrus de 4.3% en 1988, de 2.1% en 1989 et de 0.3% en 1990.

La tendance de l'augmentation des salaires est toutefois différente. Si l'on ne tient pas compte des clauses d'indemnité de vie chère, les taux annuels moyens composés des salaires de base ont progressé de 4.4% en 1988 et de 5.3% en 1989, et ils ont atteint en 1990 le niveau de 6.6%. Toutefois, dans le secteur de la fabrication, les règlements salariaux ont augmenté à un rythme inférieur depuis le deuxième trimestre de 1989. De 1983 à 1987, on constate que les hausses des salaires sont inférieures à celles de l'IPC. Toutefois, depuis 1988, les salaires ont tendance à dépasser le taux de croissance annuel de l'IPC.

La situation monétaire et la conjoncture sur le marché du crédit ont commencé à devenir de plus en plus difficiles en 1987, alors que le taux d'escompte s'établissait en moyenne à 8.4%. En mai 1990, le taux d'escompte a atteint le sommet de 14.05% alors que le taux préférentiel des banques à charte s'établissait à 14.75%. Depuis, le taux d'escompte s'est replié et, en décembre 1990, il atteignait 11.78%.

The gap between domestic rates and rates in the United States have widened since 1986. For example, the absolute difference in treasury bill rates between the two countries in 1985 averaged 1.26%. By 1989, this difference had increased to 3.94%. In September 1990, it had widened further to 5.02%. These widening absolute differences in interest rates between Canada and the United States resulted in a major accumulation of international reserves and some strengthening of the Canadian dollar exchange rate. Foreign reserves jumped from \$ U.S. 4 billion in 1986 to \$ U.S. 18 billion in November 1990. In 1986, the Canadian dollar in U.S. funds had reached a low of 71.97 cents. However, by August 1990, it had jumped to 87.38 cents and by November it was fluctuating around 85.98 cents.

The impact of this appreciation in the Canadian dollar was to lower the prices of imports and thus contribute to the moderation in the overall rise in prices. However, the appreciation of the Canadian dollar also caused the prices of exports to rise and, as a result, Canadian goods and services lost some part of their competitive edge in the international market. The balance on merchandise trade fell to \$6.9 billion in 1989 from \$10.1 billion in 1988. By 1990, some gains in exports were recorded to realize a trade balance of \$10.8 billion. Fluctuations in export earnings also contributed to the overall uncertainty and weakness in consumer spending.

(c) Price Movements by Major Components and Groups

In 1990, above average annual rates of increase were registered by three major component indexes (see Table 1): Transportation (5.6%); Health and Personal Care (4.9%) and Tobacco Products and Alcoholic Beverages (8.7%). Lower than average increases were posted by the other four major component indexes: Food (4.1%); Housing (4.5%); Clothing (2.8%) and Recreation, Reading and Education (4.4%). The behaviour of these major component indexes over the period 1989 and 1990 is displayed in Figures 1 and 2.

Changes at the highly aggregated major component levels tend to hide some of the more interesting differences at the lower level groupings. For instance within each of the four major components showing increases lower than the All-items increase, there are lower level aggregates showing increases greater than the All-items increase. Within Food, Food purchased from Restaurants showed a 4.9% increase. Within Housing, Shelter showed a 5.6% increase. Within Clothing, Clothing Services showed a 5.0% increase. Within Recreation, Reading and Education, the Education component showed a 9.1% increase (see Table 1).

L'écart entre l'épargne intérieure au Canada et au États-Unis s'est accru depuis 1986. Par exemple, au niveau des taux d'intérêt des bons du Trésor, la différence absolue entre les deux pays s'établissait en moyenne à 1.26% en 1985. En 1989, cet écart avait augmenté et atteignait 3.94%. En septembre 1990, il avait encore progressé pour se fixer à 5.02%. L'écart de plus en plus grand, en termes absolus, entre les taux d'intérêt canadien et américain a provoqué une importante accumulation des réserves internationales et un certain raffermissement du taux de change du dollar canadien. De 1986 à novembre 1990, les réserves étrangères sont passées de \$4 milliards à \$18 milliards en dollars américains. En 1986, le dollar canadien a atteint un creux de 71.97 cents en monnaie américaine. Toutefois, en août 1990, il valait 87.38 cents et, en novembre, il variait autour de 85.98 cents.

Cette appréciation du dollar canadien a entraîné une baisse du prix des exportations et, par conséquent, elle a contribué au ralentissement de la hausse globale des prix. Toutefois, l'appréciation du dollar canadien a en outre provoqué une montée du prix des exportations et, par conséquent, les biens et services canadiens ont perdu, dans une certaine mesure, leur avantage concurrentiel sur le marché international. Le solde commercial des marchandises a baissé en 1989 pour atteindre \$6.9 milliards, comparativement à \$10.1 milliards en 1988. En 1990, on a enregistré des gains au niveau des exportations, ce qui explique que le solde commercial atteignait \$10.8 milliards. Les fluctuations des gains à l'exportation ont également contribué à l'incertitude et à la faiblesse globale des dépenses des consommateurs.

(c) Mouvements des prix selon les principales composantes et les groupes

En 1990, trois des principaux indices ont eu des taux de croissance annuels supérieurs à la moyenne (voir tableau 1): il s'agit des transports (5.6%); de la santé et des soins personnels (4.9%) et des produits du tabac et des boissons alcoolisées (8.7%). Les hausses des indices des quatre autres composantes principales ont été inférieures à la moyenne: les aliments (4.1%), l'habitation (4.5%), l'habillement (2.8%) et les loisirs, la lecture et la formation (4.4%). Les figures 1 et 2 font état des mouvements des indices de ces composantes principales pendant la période allant de 1989 à 1990.

Les variations au niveau hautement détaillé des composantes principales tendent à occulter certaines des divergences les plus intéressantes des catégories de niveau inférieur. Par exemple, on retrouve dans chacune des quatre composantes principales dont les augmentations sont inférieures à la hausse de l'indice d'ensemble, des agrégats de moindre niveau qui ont progressé à un rythme plus accéléré que celui de l'indice d'ensemble. En ce qui a trait aux aliments, le prix des aliments achetés au restaurant s'est accru de 4.9%. Pour ce qui est de l'habitation, on relève une hausse de 5.6% du logement. Les services vestimentaires, qui font partie de la composante de l'habillement, ont progressé de 5.0%. L'indice de la formation qui fait partie de la composante des loisirs, lecture et formation a augmenté de 9.1% (voir tableau 1).

Percentage Change in the CPI from the Same Month of the Previous Year

Taux de variation de l'IPC par rapport au mois correspondant de l'année précédente

TABLE 1. Annual Rates of Change in the All-items, Major Components, and Selected Sub-groups of the CPI, 1989 and 1990

TABLEAU 1. Taux de variation annuel pour l'ensemble, les composantes principales et certains sous-groupes de l'IPC, 1989 et 1990

Major components and sub-groups Composantes principales et sous-groupes	Percentage change Taux de variation	
	1989	1990
All-items - Ensemble	5.0	4.8
Food - Aliments	3.6	4.1
Food purchased from stores - Aliments achetés au magasin	3.1	3.9
Food purchased from restaurants - Aliments achetés au restaurant	5.2	4.9
Housing - Habitation	5.2	4.5
Shelter - Logement	5.8	5.6
Household operation - Dépenses de ménage	3.1	2.9
Household furniture, equipment and appliances - Meubles, équipement et appareils ménagers	4.3	1.1
Clothing - Habillement	4.1	2.8
Women's wear - Vêtements pour femmes	3.8	3.5
Men's wear - Vêtements pour hommes	4.2	1.7
Clothing services - Services vestimentaires	4.7	5.0
Transportation - Transports	5.2	5.6
Private transportation - Transport privé	5.1	5.1
Public transportation - Transport public	7.2	10.8
Health and personal care - Santé et soins personnels	4.4	4.9
Health care - Soins de santé	5.2	5.2
Personal care - Soins personnels	3.9	4.6
Recreation, reading and education - Loisirs, lecture et formation	4.4	4.4
Recreation - Loisirs	4.2	3.3
Reading - Lecture	5.0	5.6
Education - Formation	5.3	9.1
Tobacco products and alcoholic beverages - Produits du tabac et boissons alcoolisées	9.2	8.7
Tobacco products - Produits du tabac	17.8	14.2
Alcoholic beverages - Boissons alcoolisées	4.5	5.4

Further breakdowns of these larger groupings will reveal the main items which differed from the general rates of price change in 1990. At this stage, however, we turn to the behaviour of some mutually exclusive special groupings of the CPI basket.

D'autres ventilations de ces catégories plus vastes permettront de découvrir les principaux articles dont le prix s'écartait du taux général de variation en 1990. À cette étape, nous préférons toutefois analyser les mouvements de certaines catégories spéciales mutuellement exclusives du panier de l'IPC.

(d) Changes in Special Aggregates

As an economy slows, the prices of goods tend to be more responsive to changes in demand conditions than those of services. This is confirmed by the movements shown in Table 2. In both 1989 and 1990, the Goods index in the CPI rose at a slower rate than that of the Service index (see Figure 3). The Service index rose at virtually the same rate in both years, 5.7% in 1989; 5.6% in 1990, while the increase in the Goods index fell to 4.0% in 1990, compared to 4.4% in 1989.

(d) Modifications des agrégats spéciaux

Dans le contexte d'un ralentissement économique, les prix des biens ont tendance à réagir davantage aux variations des conditions de la demande que ceux des services. Les mouvements dont il est fait état au tableau 2 confirment ce fait. En 1989 et en 1990, l'indice des biens de l'IPC a augmenté à un rythme inférieur à celui de l'indice des services (voir la figure 3). Pendant ces deux années, la hausse de l'indice des services a été pratiquement identique, soit 5.7% en 1989 et 5.6% en 1990, tandis que la croissance de l'indice des biens a diminué, passant de 4.4% en 1989 à 4.0% en 1990.

TABLE 2. Annual Rates of Change in Special Aggregates of the CPI, 1989 and 1990

TABLEAU 2. Taux de variation annuel des agrégats spéciaux de l'IPC, 1989 et 1990

Special aggregates Agrégats spéciaux	Percentage change Taux de variation	
	1989	1990
Goods - Biens	4.4	4.0
Durable goods - Biens durables	4.5	0.6
Semi-durable goods - Biens semi-durables	4.5	2.8
Non-durable goods - Biens non-durables	4.7	6.2
Services	5.7	5.6
Energy - Énergie	3.5	9.9
All-items excluding energy - Ensemble sans l'énergie	5.1	4.4
Food - Aliments	3.6	4.1
All-items excluding food - Ensemble sans les aliments	5.3	4.9
Food and energy - Aliments et énergie	3.5	5.8
All-items excluding food and energy - Ensemble sans les aliments et l'énergie	5.5	4.4

It is also the case that during periods of weak demand, the more durable the good, the greater the likelihood that price movements will be weak. This is supported by the information provided as durable goods prices rose by 4.5% in 1989 but grew by only 0.6% in 1990. In contrast, non-durable goods prices rose by 4.7% in 1989 and advanced by a much higher 6.2% in 1990 (see Figure 4).

En outre, dans les périodes où la demande est faible, on peut affirmer que plus un bien est durable plus vraisemblablement faibles seront ses mouvements de prix. Cela est confirmé par les renseignements fournis, car les prix des biens durables ont augmenté de 4.5% en 1989 mais de seulement 0.6% en 1990. Par ailleurs, les prix des biens non durables se sont accrus de 4.7% en 1989 et ils ont subi une hausse bien plus forte de 6.2% en 1990 (voir la figure 4).

Percentage Change in the CPI from the Same Month of the Previous Year

Taux de variation de l'IPC par rapport au mois correspondant de l'année précédente

Part of the relatively sharp rise in non-durable goods prices in 1990 was associated with the rapid rise in energy prices (9.9%), (see Figure 5). A breakdown of the Energy index by components clearly indicated that significant upward pressures came from higher prices for gasoline (14.8%) and fuel oil (19.0%) (see Table 3). These were directly related to the dramatic rise of crude petroleum prices in the last quarter of the year. A major downward impact on the overall Energy index resulted from the 5.1% decline in the prices of natural gas following a decline of 4.6% reported in 1989 (see Figure 6).

La hausse relativement importante des prix des biens non durables en 1990 est en partie attribuable à la hausse rapide des prix de l'énergie (9.9%) (voir la figure 5). La ventilation de l'indice de l'énergie selon les composantes révèle clairement que le relèvement du prix de l'essence (14.8%) et du mazout (19.0%) a exercé une pression à la hausse considérable (voir tableau 3). Ce phénomène est directement lié à la hausse spectaculaire du prix du pétrole brut pendant le dernier trimestre de l'année. Le recul de 5.1% du prix du gaz naturel, qui avait déjà diminué de 4.6% en 1989, a exercé une importante pression à la baisse sur l'indice global de l'énergie (voir la figure 6).

TABLE 3. Annual Rates of Change in Energy and Energy Components in the CPI, 1989 and 1990

TABLEAU 3. Taux de variation annuel de l'IPC pour l'énergie et les éléments de l'énergie, 1989 et 1990

Special aggregates Agréats spéciaux	Percentage change Taux de variation	
	1989	1990
Energy - Énergie	3.5	9.9
Gasoline - Essence	6.3	14.8
Fuel oil - Mazout	-1.1	19.0
Electricity - Électricité	4.1	6.0
Piped gas - Gaz naturel	-4.6	-5.1

Percentage Change in the CPI from the Same Month of the Previous Year

Taux de variation de l'IPC par rapport au mois correspondant de l'année précédente

Some users regard the performance of the All-items index excluding the Food and Energy components as indicative of an "underlying rate of inflation". This index was up by 5.5% in 1989 but had slowed to 4.4% in 1990, below the 4.8% rise reported for the All-items index.

Certains utilisateurs considèrent que, si l'on ne tient pas compte des composantes des aliments et de l'énergie, le rendement de l'indice d'ensemble indique le "taux d'inflation sous-jacent". Cet indice a augmenté de 5.5% en 1989 mais a diminué de 4.4% en 1990, ce niveau étant inférieur à la hausse de 4.8% de l'indice d'ensemble.

Percentage Change in the CPI from the Same Month of the Previous Year

Taux de variation de l'IPC par rapport au mois correspondant de l'année précédente

(e) Extreme Movements by Commodities

(1) Food

The commodities which displayed extreme movements were all contained in the Food Purchased from Stores category. The price change behaviour of the two main categories in Food is shown in Figure 8.

Pork and pork products along with fresh fruit, concentrated fruit juices, breakfast cereal and sugar registered the largest price advances in the Food index (see Table 4). The increase in the pork index, along with the related cured, prepared and ready cooked meat categories, was due largely to changes in supply conditions in Canada and the United States. Hog slaughter was down 5.0% in Canada in 1990, compared to the same period of 1989. In the U.S., the decline was 4.0% in the third quarter of 1990, compared to the corresponding period of 1989. There is also some evidence of strengthening demand for such products in both countries during 1990. Pork consumption in the United States has been rising since 1986. This has resulted in increased demand for Canadian supplies in spite of the countervailing duty on Canadian pork imposed in 1989, driving up domestic prices still further.

(e) Mouvements extrêmes des produits

(1) Aliments

Les produits pour lesquels on a enregistré des mouvements extrêmes font partie de la catégorie des aliments achetés au magasin. Les fluctuations de prix des deux principales catégories d'aliments sont illustrées à la figure 8.

Le porc et les produits du porc, de même que les fruits frais, les jus de fruits concentrés, les céréales de table et le sucre, sont les éléments de l'indice des aliments qui ont le plus augmenté (voir tableau 4). La hausse de l'indice du porc, et des catégories des viandes de salaison, des préparations à base de viande et des viandes cuites qui s'y rattachent, est en majeure partie attribuable à des variations des conditions de l'offre au Canada et aux États-Unis. L'abattage des porcs a diminué de 5.0% en 1990 au Canada comparativement à la même période en 1989. Aux États-Unis, on a observé une baisse de 4.0% pendant le troisième trimestre de 1990, comparativement à la période correspondante de l'année précédente. Certains faits permettent également de conclure à un raffermissement de la demande de ces produits dans les deux pays en 1990. Aux États-Unis, la consommation de porc est à la hausse depuis 1986. Ce qui explique l'accroissement de la demande de porcs canadiens en dépit du droit compensatoire imposé en 1989 qui a entraîné une montée des prix du porc au pays.

TABLE 4. Significant High and Low Percentage Changes in the CPI for Food by Commodities, 1989 and 1990

TABLEAU 4. Variations en pourcentage importantes (élevées ou faibles) de l'IPC pour les aliments par produits, 1989 et 1990

Commodity Produit	Significant high percentage changes Variations en pourcentage importantes (élevées)	
	1989	1990
Pork - Porc	1.6	9.0
Cured meat - Viande de salaison	-4.8	12.3
Meat preparations and ready-cooked meat - Préparations à base de viande et viandes cuites	2.3	8.3
Breakfast cereal - Céréales de table	8.2	9.3
Fresh fruit - Fruits frais	-5.1	7.8
Concentrated fruit juices - Jus de fruits concentré	-1.4	8.9
Sugar - Sucre	12.6	13.3
	Significant low percentage changes Variations en pourcentage importantes (faibles)	
	1989	1990
Fish - Poisson	3.1	-1.6
Pasta products - Pâtes alimentaires	0.7	-1.1
Fresh vegetables - Légumes frais	9.0	0.3
Dried vegetables - Légumes séchés	26.9	-12.3
Coffee - Café	0.5	-2.4
Fats and oils - Huiles et matières grasses	7.5	0.9
Carbonated beverages - Boissons gazeuses	-0.6	-2.5

The fresh fruit market and its related concentrated fruit juice market rose rapidly in response to the frost damage to the citrus crop of Florida in December 1989. In addition, the apple crop of 1990 was estimated to have declined by 4.2% compared to that of 1989.

The world average price of raw sugar in 1989-90 was up by some 20% from the previous year. This was in response to an apparent tightening in world supplies. As a result, sugar prices in 1990 registered their highest annual increase since 1980, when prices more than doubled. The sharp rise in the price of breakfast cereal may be partly attributable to the increase in sugar prices. Increases in the cost of energy, packaging and labour also contributed to the price advance of this product.

The prices of fresh and dried vegetables, pasta products, coffee, fats and oils, fish and carbonated beverages declined or registered weak increases in 1990. Excess supplies associated with unusually good growing and harvesting conditions accounted for most of these changes. Much of the fall in the Fish index was due to a drop of 14.4% in the prices of canned salmon, traceable to exceptionally good catches. The drop in the price of carbonated beverages was associated with a higher incidence of promotional activity in 1990.

On a observé une hausse rapide des prix des fruits frais et des jus de fruits concentrés en raison des dégâts causés par la gelée à la récolte d'agrumes en Floride en décembre 1989. En outre, on estime que la récolte de pommes de 1990 était inférieure de 4.2% à celle de 1989.

En 1989-1990, le prix moyen du sucre brut a augmenté, à l'échelle mondiale, d'environ 20% comparativement à l'année précédente. Ce phénomène est attribuable au resserrement manifeste des approvisionnements mondiaux. Par conséquent, la hausse annuelle des prix du sucre en 1990 était la plus élevée jamais enregistrée depuis 1980 alors que les prix avaient plus que doublé. La brusque montée du prix des céréales de table peut être en partie attribuable à l'accroissement du prix du sucre. Les hausses du coût de l'énergie, de l'emballage et de la main-d'oeuvre ont également contribué à l'augmentation du prix de ce produit.

Les prix des légumes frais et séchés, des pâtes alimentaires, du café, des huiles et des corps gras, du poisson et des boissons gazeifiées ont diminué ou ont légèrement augmenté en 1990. La plupart de ces variations sont attribuables au fait que les conditions de culture et de récolte ont été particulièrement bonnes ce qui a créé un excédent de stocks. L'indice du poisson a diminué en majeure partie à cause du repli de 14.4% du prix du saumon en boîte, qui s'explique par le fait que les prises ont été exceptionnellement bonnes. Le fléchissement du prix des boissons gazeifiées a coïncidé avec une recrudescence de l'activité promotionnelle en 1990.

(2) Housing

Increases in mortgage interest costs, water rates and fuel oil prices, all part of the Shelter index, (see Table 5) led the increase in the Housing index. The Mortgage Interest Cost index comprises a major part of the Owned Accommodation index whose movements made significant contributions to the overall change in Housing (see Figure 9). Movements in the Mortgage Interest Cost index depend on the movements in the prices of new homes (including land) and changes in interest rates on mortgage loans. The method of calculation takes into account changes in these two variables in recent years. Hence events in the latest year account for only part of the latest changes.

TABLE 5. Significant High and Low Percentage Changes in the CPI for Housing by Commodities, 1989 and 1990

TABLEAU 5. Variations en pourcentage importantes (élevées ou faibles) de l'IPC pour l'habitation par produits, 1989 et 1990

Commodity Produit	Significant high percentage changes Variations en pourcentage importantes (élevées)	
	1989	1990
Mortgage interest cost - Coûts d'intérêt hypothécaire	9.6	12.4
Water - Eau	7.8	8.8
Fuel oil - Mazout	-1.1	19.0
	Significant low percentage changes Variations en pourcentage importantes (faibles)	
	1989	1990
Tenants insurance premiums - Prime d'assurance de locataire	4.9	0.8
Replacement cost - Coût de remplacement	7.9	1.3
Piped gas - Gaz naturel	-4.6	-5.1
Long distance telephone - Services téléphoniques interurbains	-10.1	-4.9
Detergent and soap - Détergent et savon	3.6	0.6
Furniture - Meubles	4.6	1.3
Household textiles - Articles ménagers en matière textile	3.7	1.2
Household appliances - Appareils ménagers	2.6	0.0
Power-driven hand tools - Outils à main mécaniques	3.4	-0.7

House prices rose consistently faster than the All-items CPI from 1986 to 1989, but slowed down noticeably to 1.3% in 1990. Most of the downward pressures emerged from declines in house prices in the larger cities of Ontario, Alberta and British Columbia. Interest rates on mortgage loans have also risen quite noticeably in recent years. In November 1988, mortgage rates averaged around 12.0%. By August, these rates had risen to 14.25%. However, by year-end rates had dropped to 12.75% signalling a turn around in the trend relating to the cost of mortgage loans.

Notable declines were recorded for long-distance telephone charges and piped gas rates, both of which have declined every year since 1986. Improvements in the technology of supplying such services have contributed to a lowering of costs. In addition, telephone companies have engaged in a variety of promotional activities and pricing practices to generate additional revenues from this aspect of their operation. An excess supply of piped gas relative to the growth in demand has exerted downward price pressures in this market.

(2) Habitation

La montée de l'indice de l'habitation est surtout attribuable à la hausse des intérêts hypothécaires, de la taxe d'eau et du prix du mazout, qui font partie de l'indice du logement (voir tableau 5). L'indice des intérêts hypothécaires est un élément important de l'indice du logement en propriété dont les mouvements ont considérablement influé sur la variation globale de l'indice de l'habitation (voir la figure 9). Les mouvements de l'indice des frais hypothécaires sont liés à ceux du prix des maisons neuves (y compris le terrain) et aux variations des taux d'intérêt sur les prêts hypothécaires. La méthode de calcul tient compte des modifications de ces deux variables au cours des dernières années. De ce qui précède, il ressort que les changements survenus au cours de la dernière année n'expliquent qu'une partie des plus récentes variations.

De 1986 à 1989, le prix des maisons a augmenté inmanquablement plus rapidement que l'IPC d'ensemble; il a toutefois reculé visiblement en 1990 pour s'établir à 1.3%. Le recul du prix des maisons dans les grandes villes de l'Ontario, de l'Alberta et de la Colombie-Britannique a exercé la majeure partie de la pression à la baisse. Les taux d'intérêt sur les prêts hypothécaires ont également sensiblement progressé au cours des dernières années. En novembre 1988, les taux hypothécaires atteignaient en moyenne environ 12.0%. En août, ils avaient progressé et s'étaient fixés à 14.25%. Toutefois, à la fin de l'année, les taux atteignaient 12.75%, ce qui marquait un revirement de la tendance du coût des intérêts hypothécaires.

On a enregistré un fléchissement sensible des communications téléphoniques interurbaines et du gaz canalisé, qui ont tous deux diminué chaque année depuis 1986. On a apporté des améliorations au mode de prestation de ces services qui ont contribué à réduire les coûts. En outre, les compagnies de téléphone se sont lancées dans diverses activités promotionnelles et elles ont adopté divers modes de fixation des prix pour tirer des recettes additionnelles de cet aspect de leurs opérations. L'existence d'un excédent de gaz canalisé, compte tenu de la croissance de la demande, a exercé des pressions à la baisse sur ce marché.

Percentage Change in the CPI from the Same Month of the Previous Year

Taux de variation de l'IPC par rapport au mois correspondant de l'année précédente

(3) Clothing

Owing to the overall weakness in price movements associated with Clothing, this index played a major role in dampening the overall rise in the general price level. The weakness was much more evident in the Men's Wear market (see Figure 10) with the exception of the significant drop in Women's fur coats (see Table 6). Market analysts claim that the market for Men's Wear is much more susceptible to swings in demand than those for Women's Wear.

(3) Habillement

En raison de la faiblesse globale des mouvements des prix dans ce domaine, l'indice a eu un effet modérateur important sur la hausse globale du niveau général des prix. Cette faiblesse était beaucoup plus apparente sur le marché des vêtements pour hommes (voir la figure 10), exception faite de la baisse considérable qu'ont subi les manteaux de fourrure pour les femmes (voir le tableau 6). Les analystes de marché soutiennent que le marché des vêtements pour hommes est beaucoup plus sensible aux fluctuations de la demande que celui des vêtements pour femmes.

TABLE 6. Significant Low Percentage Changes in the CPI for Clothing by Commodities, 1989 and 1990

TABLEAU 6. Variations en pourcentage importantes (faibles) de l'IPC pour l'habillement par produits, 1989 et 1990

Commodity Produit	Significant low percentage changes Variations en pourcentage importantes (faibles)	
	1989	1990
Women's fur coats - Manteaux de fourrure pour femmes	-8.4	-9.2
Men's coats and jackets - Manteaux et vestes pour hommes	2.1	1.0
Men's jeans - Jeans pour hommes	0.8	-3.1
Men's dress shirts - Chemises habillées pour hommes	3.8	1.3
Men's shoes - Souliers pour hommes	4.9	1.0
Boys' pants - Pantalons pour garçons	3.3	-1.5
Yarn - Laine	5.3	-2.9

The sharp downturn in the prices of women's fur coats was attributable, in part, to the success of the animal rights lobby and, in part, to over-production following the dramatic rise in demand in 1987. The decline may also be due to warmer winters in recent years and, undoubtedly, to the economic slowdown.

(4) Transportation

The increase in the Transportation index in 1990 was a major source of upward pressure on the general price level. In the Private Transportation sub-component, significantly higher increases were reported for gasoline prices, parking services, drivers' licence fees and automobile registration fees. In the Public Transportation component (see Figure 11) large fare increases were reported for all modes of inter-city transportation. The only major downward pressure resulted from a notable slowing of new automobile prices (see Table 7).

Gasoline prices rose mainly in response to the rapid rise in crude petroleum prices following Iraq's invasion and occupation of Kuwait in early August. Some upward pressures on crude oil prices, however, were observed in 1989 and in early 1990. The sharp rise in parking rates was partly attributable to a new levy in the greater Toronto area. Drivers' licence fees rose 33% in Nova Scotia and the Northwest Territories in January and by 44% in Manitoba in April. Auto vehicle registration fees rose sharply in Alberta in May.

Le brusque recul du prix des manteaux de fourrure pour femmes est attribuable, d'une part, aux pressions exercées par les défenseurs des animaux et, d'autre part, à la sur-production qui découle de l'augmentation spectaculaire de la demande en 1987. À cet égard, d'autres facteurs entrent peut-être en ligne de compte, notamment l'adoucissement des températures hivernales au cours des dernières années et, sans nul doute, la récession économique.

(4) Transports

La hausse de l'indice des transports en 1990 a été l'un des principaux facteurs de la pression à la hausse sur le niveau général des prix. En ce qui a trait à la sous-composante du transport privé, on a observé des augmentations considérables du prix de l'essence, des services de stationnement, des droits de permis de conduire et des droits d'immatriculation des automobiles. Pour ce qui est de la composante du transport public (voir la figure 11), on a relevé une importante progression des tarifs de tous les modes de transport interurbain. La seule pression à la baisse importante est attribuable à un ralentissement notable du prix des automobiles neuves (voir le tableau 7).

La montée du prix de l'essence est surtout attribuable à l'accroissement rapide du prix du pétrole brut à la suite de l'invasion et de l'occupation du Koweït par l'Iraq au début du mois d'août. Toutefois, le prix du pétrole brut a subi, en 1989 et au début de 1990, certaines pressions à la hausse. La brusque augmentation des tarifs de stationnement est en partie attribuable à un nouveau prélèvement obligatoire dans la région métropolitaine de Toronto. Les droits de permis de conduire ont progressé de 33% en Nouvelle-Écosse et dans les Territoires du Nord-Ouest en janvier, et de 44% au Manitoba en avril. Les droits d'immatriculation des véhicules automobiles ont subi une très forte hausse en Alberta au mois de mai.

TABLE 7. Significant High and Low Percentage Changes in the CPI for Transportation by Commodities, 1989 and 1990

TABLEAU 7. Variations en pourcentage importantes (élevées et faibles) de l'IPC pour le transport par produits, 1989 et 1990

Commodity Produit	Significant high percentage changes Variations en pourcentage importantes (élevées)	
	1989	1990
Gasoline - Essence	6.3	14.8
Parking - Stationnement	11.3	12.9
Driving lessons - Cours de conduite	4.4	6.6
Drivers' licences - Permis de conduire	4.1	9.0
Automotive vehicle registration fees - Frais d'immatriculation pour véhicules automobiles	5.0	14.0
Air transportation - Transport aérien	10.7	14.3
Rail transportation - Transport par train	9.2	20.4
Highway bus transportation - Transport par autocar	4.4	13.3
	Significant low percentage changes Variations en pourcentage importantes (faibles)	
	1989	1990
	5.5	0.4
Purchase of automobiles - Achat d'automobiles		

With the overall decline in consumer confidence in 1990, the market for new automobiles remained sluggish and weak. To stimulate sales, suppliers offered enhanced cash rebates, increased discounts and lower financing charges. The price of new cars rose by 0.4% in 1990, the lowest annual rise since 1967.

La diminution radicale des tarifs aériens en 1980 (-16.0%) a été l'une des principales conséquences de la déréglementation de l'industrie du transport aérien des passagers. En 1990, plusieurs compagnies aériennes avaient entrepris de rationaliser leurs opérations pour éviter la faillite. La plupart d'entre elles devaient tenir compte à la fois de la hausse des coûts attribuable en partie aux importants investissements de capitaux effectués au cours de la dernière décennie et à une forte concurrence. Au Canada, la rationalisation s'est traduite par l'intégration et la disparition de petites compagnies aériennes, les réductions de personnel, les ventes de biens et la réduction de la fréquence de certains vols. Parallèlement, les tarifs aériens ont augmenté de 10.7% en 1989 et, à nouveau, de 14.3% en 1990.

Les tarifs ferroviaires ont également progressé rapidement de 20.4% dans l'espoir de réduire les pertes qu'engendrent les réductions des subventions gouvernementales. Les services d'autobus routiers ont vraisemblablement été les plus avantagés par les fortes hausses des tarifs aériens et ferroviaires. Ce changement a entraîné une montée de 13.3% des tarifs d'autobus interurbains en 1990, faisant suite à une hausse plus modérée de 4.4% en 1989.

Compte tenu que, dans l'ensemble, les consommateurs craignaient de dépenser de l'argent en 1990, le marché des automobiles neuves est demeuré hésitant et faible. Pour stimuler les ventes, les fournisseurs ont offert des remboursements en espèces accrus, des rabais plus importants et des frais de financement réduits. Le prix des automobiles neuves a augmenté de 0.4% en 1990, soit la hausse annuelle la plus faible depuis 1967.

Taux de variation de l'IPC par rapport au mois correspondant de l'année précédente

(5) Health and Personal Care

This index and most of its components (see Figure 12) advanced at or near the increase observed for the All-items index in 1990. The prices of razors and blades indicated the only large increase. On the lower end price declines were noted for contact lenses, toothpaste and electric styling equipment. The price of shaving cream remained unchanged (see Table 8).

(5) Santé et soins personnels

Cet indice et la plupart de ses composantes (voir la figure 12) a progressé au même rythme ou presque que l'indice d'ensemble en 1990. Seuls les prix des rasoirs et des lames ont fortement progressé. Par contre, on a observé des diminutions du prix des verres de contact, de la pâte dentifrice et du matériel électrique de coiffure. Le prix de la crème à barbe est demeuré stable (voir le tableau 8).

TABLE 8. Significant High and Low Percentage Changes in the CPI for Health and Personal Care by Commodities, 1989 and 1990

TABLEAU 8. Variations en pourcentage importantes (élevées et faibles) de l'IPC pour la santé et les soins personnels par produits, 1989 et 1990

Commodity Produit	Significant high percentage changes Variations en pourcentage importantes (élevées)	
	1989	1990
Razors and blades – Rasoirs et lames	5.1	9.4
Contact lenses – Verres de contact Shaving cream – Crème à raser Tooth-paste – Pâte dentifrice Electric hair-styling equipment – Appareils électriques pour le soin des cheveux	Significant low percentage changes Variations en pourcentage importantes (faibles)	
	1989	1990
	-0.2	-0.6
	0.7	0.0
	3.9	-0.8
	0.9	-2.6

The prices of contact lenses have fallen in response to increased competition resulting from a larger number of manufacturers entering the market. Prices of toothpaste fell for six months in 1990 signalling that this market had experienced considerable promotional activity. The fall in the prices of electric hair-styling equipment indicated that the product had suffered the fate of most durable goods.

Le prix des verres de contact a diminué en raison de la concurrence accrue qui découle de la présence d'un plus grand nombre de fabricants sur le marché. Le fléchissement pendant six mois du prix de la pâte dentifrice est le reflet de l'intensive activité promotionnelle dont ce marché a fait l'objet. Le recul du prix du matériel électrique de coiffure révèle que ce produit a subi le même sort que la plupart des biens durables.

(6) Recreation, Reading and Education

Apart from the rise in film prices in 1990, most of the other large price increases were noted in service charges associated with recreational activities and education (see Table 9). The price of tickets to football games and the theatre appeared to be driven by higher costs. Health club fees rose partly due to a reduction in such facilities in recent years. There appears to be an increase in demand for golf and ski services causing prices to rise noticeably in these markets. Ski operators have also cited higher costs of operation following several years of unusually warm and unstable winter conditions.

(6) Loisirs, lecture et formation

Exception faite de la hausse des prix des films en 1990, la plupart des autres augmentations importantes ont été celles des frais de gestion des activités récréatives et de la formation (voir le tableau 9). La montée des coûts semble avoir exercé une pression à la hausse sur les prix des billets pour les matchs de football et le cinéma. L'accroissement des frais d'abonnement à un centre de culture physique s'explique en partie par la réduction du nombre de ceux-ci au cours des dernières années. Il semble y avoir une demande accrue pour les services de golf et de ski ce qui fait que les prix ont progressé de façon marquée. Les propriétaires de centres de ski ont également déclaré des frais d'exploitation accrus après plusieurs années où les températures hivernales ont été anormalement tempérées et instables.

TABLE 9. Significant High and Low Percentage Changes in the CPI for Recreation, Reading and Education by Commodities, 1989 and 1990

TABLEAU 9. Variations en pourcentage importantes (élevées et faibles) de l'IPC pour loisirs, lecture et formation par produits, 1989 et 1990

Commodity Produit	Significant high percentage changes Variations en pourcentage importantes (élevées)	
	1989	1990
Photo film - Pellicules photographiques	---	18.5
Football sports events - Événements sportifs de football	3.4	8.7
Live stage performances - Spectacles sur scène	9.8	8.5
Health club fees - Cotisations pour les clubs conditionnement	----	20.1
Golfing fees - Cotisations pour le golf	10.1	10.2
Skiing fees - Cotisations pour le ski	----	21.6
Post-secondary education fees - Frais d'enseignement postsecondaire	5.4	10.4
Significant low percentage changes Variations en pourcentage importantes (faibles)		
	1989	1990
35 mm cameras - Appareils photo 35 millimètres	1.5	-2.4
Camping and picnic equipment - Matériel de camping et de pique-nique	7.6	0.8
Home-entertainment equipment - Matériel de divertissement au foyer	1.4	-0.5

University tuition fees rose sharply in 1990 to augment government grants. In the province of Québec, tuition fees had remained unchanged for over twenty years, but in 1990 rose by slightly more than 70%. Increases in the rest of the country varied between 5.4% and 13.7% (see Figure 13).

Price declines were registered for 35 mm cameras and home-entertainment equipment. Part of the price declines in cameras was explained by a shift in demand for other substitute type goods, notably video cameras. Prices of television sets, stereo-components and video cassette players (home entertainment equipment) all fell in 1990. Increased competition from products manufactured in South Korea and China and the consumer uncertainty surrounding the decline in the economy have contributed to these decreases.

(7) Tobacco Products and Alcoholic Beverages

The Tobacco Products component of this index has been responsible for the large increase in 1990 (see Figure 14). Prices of Tobacco products rose throughout the year with a large proportion of the increase concentrated in the month of May, following a federal tax increase. In the latter part of April, Nova Scotia, Québec and Ontario initiated substantial tax increases on cigarettes. Tax increases affecting cigarette prices by provinces and the Federal Government are shown in Table 10.

Les frais de scolarité au niveau universitaire ont fortement augmenté en 1990 pour accroître les subventions gouvernementales. Au Québec, les frais de scolarité, qui n'avaient pas variés pendant plus de 20 ans, ont augmenté en 1990 d'un peu plus de 70%. Ailleurs au pays, les hausses étaient comprises entre 5.4% et 13.7% (voir la figure 13).

On a observé une diminution du prix des caméras 35 mm et du matériel de divertissement au foyer. Le recul du prix des caméras s'explique en partie par le fait que les consommateurs acquièrent maintenant d'autres biens de remplacement, en particulier des caméras vidéos. Les prix des téléviseurs, des éléments de chaîne stéréo et des magnétoscopes (matériel de divertissement au foyer) ont diminué en 1990. Ces diminutions sont attribuables à la concurrence accrue des produits fabriqués en Corée du Sud et en Chine et à l'hésitation des consommateurs face à la récession économique.

(7) Produits du tabac et boissons alcoolisées

La composante des produits du tabac de cet indice est celle qui a le plus augmenté en 1990 (voir la figure 14). Le prix des produits du tabac s'est accru pendant toute l'année, surtout en mai après la majoration de la taxe fédérale. Vers la fin du mois d'avril, la Nouvelle-Écosse, le Québec et l'Ontario ont également annoncé des hausses considérables de la taxe sur les cigarettes. Les hausses fiscales des administrations provinciales et fédérale qui touchent les prix des cigarettes figurent au tableau 10.

Percentage Change in the CPI from the Same Month of the Previous Year

Taux de variation de l'IPC par rapport au mois correspondant de l'année précédente

TABLE 10. Tax Changes on Cigarettes by Government Authorities in 1990

TABLEAU 10. Variations des taxes sur les cigarettes imposées par les autorités gouvernementales en 1990

Government Gouvernement	Date and tax changes per package of cigarettes in 1990* Dates d'applications et des changements de taxe par paquet de cigarettes en 1990*
Newfoundland Terre-Neuve	No change. Tax stood at \$1.32 Pas de changement. La taxe demeure à \$1.32
Prince Edward Island Île-du-Prince-Édouard	From \$1.175 to \$1.75, March 14 De \$1.175 à \$1.75, 14 mars
Nova Scotia Nouvelle-Écosse	From \$1.125 to \$1.6975, April 28 De \$1.125 à \$1.6975, 28 avril
New Brunswick Nouveau-Brunswick	From \$1.675 to \$1.6975, April 1: From \$1.6975 to \$1.7125, October 1 De \$1.675 à \$1.6975, 1 ^{er} avril: de \$1.6975 à \$1.7125, 1 ^{er} d'octobre
Québec	From \$1.13 to \$1.38, April 26 De \$1.13 à \$1.38, 26 avril
Ontario	From \$0.9575 to \$1.2075, April 25 De \$0.9575 à \$1.2075, 25 avril
Manitoba	From \$1.625 to \$1.75, December 2 De \$1.625 à \$1.75, 2 décembre
Saskatchewan	No change. Tax stood at \$1.67 Pas de changement. La taxe demeure à \$1.67
Alberta	From \$1.20 to \$1.40, March 23 De \$1.20 à \$1.40, 23 mars
British Columbia Colombie-Britannique	From \$1.152 to \$1.24, March 1: From \$1.24 to \$1.272, September 1 De \$1.152 à \$1.24 1 ^{er} mars: de \$1.24 à \$1.272, 1 ^{er} septembre
Federal Government Gouvernement Fédéral	9.695 cents for each multiple of 5 cigarettes, from May 1989 9.695 cents pour chaque multiple de 5 cigarettes, à compter de mai 1989

* A package contains 25 cigarettes everywhere except in British Columbia, where the package contains 20 cigarettes.

* Un paquet contient 25 cigarettes partout sauf en Colombie-Britannique où le paquet contient 20 cigarettes.

(f) Movements in City CPI's

In 1990, as noted before, the Canada CPI rose by 4.8%. Of the sixteen cities for which CPI's are published (see Table 11), ten posted increases lower than this average while the remaining six recorded increases in excess of it. The increases ranged from 4.2% in Québec City, Montréal, Thunder Bay and Regina to 6.2% in Calgary. Of the six cities with All-items increases exceeding that of Canada's 4.8%, four were the most Western : Edmonton (5.4%), Calgary (6.2%), Vancouver (5.5%) and Victoria (5.3%). The remaining two were the Maritime cities of Charlottetown/Summerside (5.0%) and Halifax (5.1%).

In the four Western most cities, most of the upward pressures originated from higher than average advances in their indexes for Food, Housing, Transportation and Tobacco Products and Alcoholic Beverages. In Charlottetown/Summerside, significant increases were registered in Food, Health and Personal Care and Tobacco Products and Alcoholic Beverages. In Halifax, large increases occurred in Food, Transportation and Tobacco Products and Alcoholic Beverages.

(f) Mouvements des IPC des villes

Comme nous l'avons déjà mentionné, l'IPC du Canada s'est accru de 4.8% en 1990. Dans 10 des 16 villes pour lesquelles des IPC sont diffusés (voir le tableau 11), les augmentations ont été inférieures à cette moyenne tandis que dans les six autres, elles ont été supérieures. Les hausses étaient comprises entre 4.2% à Québec, Montréal, Thunder Bay et Regina et 6.2% à Calgary. Quatre des six villes où les hausses de l'indice d'ensemble dépassaient celles de l'indice du Canada, qui s'établissait à 4.8%, étaient parmi celles qui sont situées le plus à l'ouest: Edmonton (5.4%), Calgary (6.2%), Vancouver (5.5%) et Victoria (5.3%). Les deux autres étaient situées dans les provinces maritimes. Il s'agit de Charlottetown/Summerside (5.0%) et Halifax (5.1%).

Dans les quatre villes situées le plus à l'ouest, la majeure partie de la pression à la hausse provenait des augmentations supérieures à la moyenne des indices des aliments, de l'habitation, des transports et des produits du tabac et des boissons alcoolisées. À Charlottetown/Summerside, on a observé un accroissement considérable des indices des aliments, de la santé et des soins personnels et des produits du tabac et des boissons alcoolisées. À Halifax, on a relevé d'importantes hausses des aliments, des transports et des produits du tabac et des boissons alcoolisées.

TABLE 11. Percentage Changes in All-items and Major Component Indexes by Canada and Cities, 1990**TABEAU 11. Variation en pourcentage de l'ensemble et des composantes principales pour le Canada et les villes, 1990**

	All-items	Food	Housing	Clothing	Transportation	Health and personal care	Recreation, reading and education	Tobacco products and alcoholic beverages
	Ensemble	Aliments	Habitation	Habillement	Transports	Santé et soins personnels	Loisirs, lecture et formation	Produits du tabac et boissons alcoolisées
Canada	4.8	4.1	4.5	2.8	5.6	4.9	4.4	8.7
St. John's	4.3	3.4	4.4	3.7 (H-E)	5.6	3.3	3.7	5.0 (L-F)
Charlottetown/Summerside	5.0	5.4	4.3	1.9 (L-F)	4.5	7.0 (H-E)	3.9	12.2
Halifax	5.1	5.1	4.3	23.1	5.1	3.5	3.7	12.7 (H-E)
Saint John	4.5	5.1	4.1	2.8	4.3	4.2	3.0	9.9
Québec	4.2 (L-F)	2.4 (L-F)	5.1	2.8	3.4 (L-F)	4.4	3.9	11.0
Montréal	4.2 (L-F)	3.2	4.2	2.8	3.8	4.3	4.9 (H-E)	11.0
Ottawa	4.7	4.6	5.1	3.4	4.6	5.4	3.7	7.6
Toronto	4.7	4.4	3.9	3.1	6.2	6.5	4.7	7.2
Thunder Bay	4.2 (L-F)	4.1	3.7	3.2	4.9	4.3	3.6	8.1
Winnipeg	4.6	5.5	3.7	3.1	6.3	3.2	4.2	6.3
Regina	4.2 (L-F)	4.6	2.6 (L-F)	3.3	8.2 (H-E)	2.7 (L-F)	2.5 (L-F)	6.3
Saskatoon	4.4	4.6	3.1	3.1	8.1	4.0	3.0	6.1
Edmonton	5.4	3.4	5.8	2.7	6.4	4.9	4.0	9.5
Calgary	6.2 (H-E)	6.7 (H-E)	6.3 (H-E)	2.9	7.3	4.6	4.6	9.2
Vancouver	5.5	6.3	5.3	2.1	7.2	3.9	4.2	7.2
Victoria	5.3	5.1	5.3	2.1	6.5	4.6	4.3	7.8
Range - Écart	2.0	4.3	3.7	1.8	4.8	4.3	2.4	7.7

H = High L = Low E = Élevée F = Faibles.

The absolute differences between the largest and smallest increase (the range) in the All-items and each of the major component indexes across cities are also shown in Table 11. For the All-items index, the highest increase was 6.2% (Calgary) and the lowest was 4.2% (e.g. Montréal) and hence the range was 2.0%. This absolute difference was largest in the case of the increases found in the Tobacco Products and Alcoholic Beverages, 12.7% in Halifax compared to 5.0% in St. John's. In addition, large differences were found in the Transportation, Food and Health and Personal Care indexes. The lowest absolute difference was registered by the Clothing index.

Les écarts absolus entre les augmentations les plus fortes et les plus faibles (étendue) de l'indice d'ensemble et de chacun des indices des composantes principales des villes figurent également au tableau 11. Pour ce qui est de l'indice d'ensemble, la plus forte augmentation est de 6.2% (Calgary) et la plus faible est de 4.2% (Montréal); l'étendue est donc de 2.0%. L'écart absolu le plus considérable a été relevé entre les produits du tabac et les boissons alcoolisées, dont les hausses sont comprises entre 12.7% à Halifax et 5.0% à Saint-John. En outre, on a observé d'importants écarts des indices des transports, des aliments et de la santé et des soins personnels. L'indice de l'habillement est celui où on a enregistré l'écart absolu le plus faible.

Appendix 1

THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e., price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the **movement** of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for 26 cities are available at present in Part V of this publication. Inter-spatial indexes covering approximately two thirds of the CPI basket for a selected number of cities are also available in this section.

Coverage

Beginning with the December 1988 to January 1989 price change, the weights used in the Consumer Price Index are those pertaining to 1986 expenditure patterns. Data used for establishing these patterns were obtained through the 1986 Family Expenditure Surveys. The expenditure data represents the expenditures of all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1986 revealed 82 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 82 urban centres into 34 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

Separate CPI's are published for 18 of these centres which, together, accounted for approximately 75% of the total 1986 current consumption expenditures reported in the 82 centres. These 18 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 300 commodities are priced in each of these 18 cities while in the remaining 64 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

Appendice 1

L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le **mouvement** des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour 26 villes, à la Partie V de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

Champ d'observation

À compter de janvier 1989, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1986. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1986. Les données sur les dépenses représentent les dépenses de tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1986, 82 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 82 centres urbains en 34 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Des IPC distincts sont publiés pour 18 centres qui, ensemble, interviennent pour près de 75% du total des dépenses courantes de consommation déclarées en 1986 par les 82 centres. Les 18 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 300 produits dans chacune des 18 villes; ce nombre est plus faible dans les 64 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

The 1982 family expenditure patterns were used to compile the CPI from January 1985 to December 1988. In January 1989 the 1982 weights were replaced by those derived from the expenditure patterns of 1986. This updating continues the policy of updating on a four-year cycle.

Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve son utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

La composition des dépenses des familles de 1982 a servi au calcul de l'IPC à partir de janvier 1985 jusqu'à décembre 1988. En janvier 1989, les pondérations de 1982 ont été remplacées par d'autres dérivées de la composition des dépenses de 1986. Cette mise à jour poursuit la politique de Statistique Canada de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE II. Comparison of 1982 and 1986 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABLEAU EXPLICATIF II. Comparaison des pondérations des dépenses de 1982 et de 1986 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

Major components	Weights 1982	Weights 1986
Composantes principales	Pondérations 1982	Pondérations 1986
All-items - Ensemble	100.00¹	100.00¹
Food - Aliments	20.02	18.05
Housing - Habitation	38.14	36.32
Clothing - Habillement	8.37	8.69
Transportation - Transports	15.75	18.29
Health and personal care - Santé et soins personnels	4.02	4.20
Recreation, reading and education - Loisirs, lecture et formation	8.25	8.84
Tobacco products and alcoholic beverages - Produits du tabac et boissons alcoolisées	5.45	5.60

¹ Figures may not add up due to rounding.

¹ Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

The weights shown in Text Table II represent expenditures in 1982 (1982 quantities valued in 1982 prices) and in 1986 (1986 quantities valued in 1986 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981 = 100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the:

Consumer Prices Section,
Prices Division, Statistics Canada,
Ottawa, Ontario,
K1A 0T6
(Telephone: (613) 951-9606).

The indexes based on 1986 weights were linked or connected in December 1988 to the appropriate indexes based on 1982 weights which had been in use since January 1985.

This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Les pondérations du tableau explicatif II représentent les dépenses en 1982 (quantités et prix de 1982) et en 1986 (quantités et prix de 1986). Elles ne peuvent servir à reconstruire ni à réagréger des indices sur la base de 1981 = 100. La méthode à suivre pour une telle reconstruction peut être obtenue sur demande auprès de la:

Section des prix à la consommation
Division des prix, Statistique Canada
Ottawa (Ontario)
K1A 0T6
(Téléphone: (613) 951-9606).

Les indices fondés sur les pondérations de 1986 ont été enchaînés ou raccordés en décembre 1988 aux indices correspondants fondés sur les pondérations de 1982, en usage depuis janvier 1985.

Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1986=100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1986=100 time base became effective with the release of the June 1990 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised periodically.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1981=100 or 1986=100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights. Furthermore, the method employed in converting to the 1986=100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1981 or 1986 time base series, the same is not true for changes measured in terms of index points.

Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 1 involves compounding the growth rate over the latest three-month period on the seasonally adjusted level (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", **Retail Prices and Living Costs** - Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

Reconstructed Indexes

With the release of the January 1985 Consumer Price Index, certain series were reconstructed historically to reflect the introduction of the Consumer Classification System of Statistics Canada which was introduced with the 1982 Updating. A few additional reconstructions were made with the introduction of the 1986 basket. For further information, contact Prices Division (613-951-9606 or 951-3353).

Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1986=100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1986=100 est devenue effective à partir de la diffusion de l'indice de juin 1990. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision périodiquement.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1981=100 et 1986=100 sont équivalentes, les petites différences étant attribuables à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base. De plus, la méthode de conversion selon la base 1986=100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1981 ou 1986) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 1 consiste à prendre un taux de croissance composé sur le niveau désaisonné des trois derniers mois (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", **Prix de détail et coût de la vie** - Bulletin de service (n° 62-005 au catalogue), vol. 4, n° 4, avril 1975.

Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation de janvier 1985, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent l'introduction du système de classification de la consommation de Statistique Canada qui fut introduit avec la mise à jour de 1982. L'adoption du panier de 1986 a amené quelques autres remaniements. Pour plus de renseignements, communiquez avec la Division des prix (613-951-9606 ou 951-3353).

Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978, 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between 1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres **were not** included in the calculation of the official CPI for Canada. With the introduction of the 1982 Updating, these two centres were included in the calculation of the official CPI for Canada.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be used to represent that of owned accommodation. As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the sixteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two-month lag.

Provincial CPI's

Consumer price indexes for provincial urban centres were published for the first time in the July-September 1988 issue of this publication. An article describing the coverage and method of these indexes was published in the same issue. Updated Provincial CPI's are now a permanent feature of this publication.

Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in **The Consumer Price Index, Reference Paper, Updating Based on 1986 Expenditures**, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in *Family Expenditure in Canada, 1986*, Catalogue 62-555.

Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978, les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982=100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains **n'étaient pas** compris dans le calcul de l'IPC officiel pour le Canada. Avec l'introduction de la mise à jour de 1982, ces deux centres ont été pris en compte lors du calcul de l'IPC officiel pour le Canada.

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des seize autres centres urbains pour lesquels un IPC est calculé. Les données sur les loyers utilisées sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

IPC Provinciaux

Des indices de prix à la consommation pour les centres urbains provinciaux ont été publiés pour la première fois dans le numéro de juillet-septembre 1988 de la présente publication. Un article décrivant la couverture et la méthodologie de ces indices est paru dans ce même numéro. Les IPC provinciaux mis à jour sont devenus partie intégrante de la présente publication.

Renseignements supplémentaires et publications connexes

Le Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1986, (hors-série), n° 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans *Dépenses des familles au Canada, 1986*, n° 62-555 au catalogue.

The latest information on the Consumer Price Index for Canada and 18 cities is also available in the **Consumer Price Index**, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 (613-951-9606 or 613-951-3353).

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de 18 villes sont publiés dans le bulletin mensuel **L'indice des prix à la consommation**, n° 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont disponibles. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6 (613-951-9606 ou 613-951-3353).

Appendix 2

THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1986 and June 1990, consumer prices as measured by the CPI rose 19.2% such that, goods and services which could have been purchased for \$100.00 in 1986 would cost \$119.20 in June 1990. Each consumer dollar in June 1990 therefore buys less than in 1986. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in June 1990 compared to the 1986

$$\text{dollar was } 83.9 \text{ (100 cents X } \frac{100.0}{119.2} = 83.9 \text{ cents).}$$

This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1986 dollar at different points in time (Table 2) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

Appendice 2

LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1986 et juin 1990, les prix à la consommation mesurés par l'IPC ont grimpé de 19.2% de sorte que les biens et services qu'on pouvait acheter en 1986 avec \$100.00 coûtaient \$119.20 en juin 1990. Chaque dollar de consommation en juin 1990 achète donc moins qu'en 1986. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en juin 1990, par rapport au dollar de 1986,

$$\text{s'établissait à } 83.9 \text{ cents (100 cents X } \frac{100.0}{119.2} = 83.9 \text{ cents).}$$

Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1986 (tableau 2) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

Appendix 3

SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then falls back, subsequently to rise again. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement which reflects continuing or slowly changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

Appendice 3

LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activité économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, descend puis remonte à nouveau. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable qui reflète la continuité ou un changement lent de l'économie.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

The methodologies used for removing as much of the seasonal fluctuation as possible from a series have been described in detail in numerous articles and texts on the subject.¹ Rather than reiterating those texts, an outline of the methodologies employed in the derivation of seasonally adjusted consumer price indexes for Canada is provided below.

With the introduction of the 1982 basket, the seasonal adjustment methodology was changed. Direct seasonal adjustment is performed at the level of the seven major components with the seasonally adjusted All-items and All-items excluding Food indexes being the weighted average of their components. This indirect seasonal adjustment of the two aggregate series ensures (except for possible rounding differences) that the aggregate movements will be within the range of their components' movements. Since each basket has its own weights, the move to indirect seasonal adjustment of the aggregates dictated the use of unlinked series as the basis for the seasonal adjustment. Estimating a separate seasonal pattern for each basket has some conceptual advantages since it means that the classification and weight changes introduced with each updating of the basket will not distort the estimates. However, there is an operational difficulty which arises due to the desirability of having at least seven years of data for estimation of the seasonal pattern and the current rapidity with which CPI baskets are updated. Given the current updating cycle, at the time a new basket is introduced, we have only three years of data for the new basket. To create a longer time series, we chain on data from the previous basket back to its beginning. This reintroduces some of the distortions present in estimating seasonal patterns from linked data.

The above distortion will be minimized through the use of concurrent seasonal adjustment rather than forecast seasonal factors. With the concurrent methodology, the seasonal pattern is estimated each month using all available data. However, to minimize revisions we will revise past indexes only at the end of each calendar year.

¹ Shiskin, Julius and Harry Eisenpress, "Seasonal Adjustments by Electronic Computer Methods", Technical Paper 12, National Bureau of Economic Research, New York, 1958.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la question¹. Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avec l'introduction du panier 1982, la méthode de désaisonnalisation fut changée. La désaisonnalisation directe est effectuée à l'échelle des sept composantes principales; les versions désaisonnalisées de l'indice des aliments et de l'indice d'ensemble sans les aliments correspondent à la moyenne pondérée de leurs composantes. Cette désaisonnalisation indirecte des deux séries agrégées garantit que les mouvements agrégés se situeront dans les limites des mouvements de leurs composantes (exception faite des différences attribuables à l'arrondissement). Puisque chaque panier a ses propres coefficients de pondération, le passage à la méthode indirecte de désaisonnalisation des séries agrégées a entraîné l'utilisation, à titre de base de la désaisonnalisation, des séries non enchaînées. L'estimation de tendances saisonnières distinctes pour chacun des paniers représente certains avantages au point de vue conceptuel, puisqu'elle signifie que les changements apportés à la classification et aux coefficients de pondération au moment de la mise à jour du panier n'entraîneront aucune distortion. Toutefois, une difficulté opérationnelle existe étant donné, d'une part, qu'il est souhaitable d'avoir au moins sept années de données pour estimer la tendance saisonnière et, d'autre part, en raison de la rapidité avec laquelle on met maintenant à jour le panier de l'IPC. Étant donné le cycle courant de mise-à-jour, nous n'avons que trois ans de données pour un nouveau panier lorsque celui-ci est introduit. Afin de créer une série plus longue, nous enchaînons les données du nouveau panier à celles du panier précédent jusqu'à son début. Cette mesure ramène certaines distorsions que l'on retrouvait dans l'estimation des tendances saisonnières des données enchaînées.

Ces distorsions seront toutefois minimisées par l'utilisation de désaisonnalisations concomitantes plutôt que de coefficients saisonniers projetés. Dans la méthodologie concomitante, la tendance saisonnière est estimée chaque mois au moyen de toutes les données accessibles. Nous ne recalculerons toutefois les indices antérieurs qu'à la fin de chaque année civile, et ce pour réduire au minimum le nombre de révisions.

Appendix 4

CITY AVERAGE RETAIL PRICES

Introduction

The Average Retail Price Survey is under taken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 cities. These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally under taken during the first week of January, April, July and October.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

Calculation Methodology

City Prices. Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

Appendice 4

PRIX DE DÉTAIL MOYENS PAR VILLE

Introduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

Méthode de calcul

Prix urbains. Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas ces articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

Weighted city averages. A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey can be acquired by contacting Prices Division.

Average Retail Prices for Gasoline

Tables 16 through 21 présent average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the 16 urban centres for which Consumer Price Indexes are produced and cover the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

Average Retail Prices for Fuel Oil

Table 22 presents average retail prices for fuel oil. The information is collected nine times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 22 are confined to 16 urban centres and for the time period January 1988 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

Moyennes pondérées des villes. Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

Spécification des articles

Une description des quelques 60 articles contenus dans l'enquête des prix moyens peut être obtenu en communiquant avec la Division des prix.

Prix de détail moyens de l'essence

Les tableaux 16 à 21 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. Les séries présentées se limitent aux 16 centres urbains pour lesquels on produit un IPC pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

Prix de détail moyens du mazout

Le tableau 22 présente les prix de détail moyens du mazout. Cette information est relevée neuf fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 22 se limitent à 16 centres urbains, pour la période allant de janvier 1988 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

Appendix 5

INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transportation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these items by means of benefits separate from those regulated by statistical means. Finally, government

Appendice 5

COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créés. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que

employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking an other complete survey.

statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources de données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistics Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la révision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada, telephone: (613) 951-0120.

Principal commodity group	Number of items priced (if available)
Food at home	104
Meals away from home	9
Household maintenance and services	11
Household supplies	8
Communications	3
Domestic help (depending on location)	2-8
Clothing and home furnishings	22
Transportation and automobile operation	22
Health and personal care	25
Reading and recreation	13
Tobacco and alcohol	12

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada, téléphone: (613) 951-0120.

Groupe principal de produits	Nombre d'articles dont le prix est relevé (lorsque disponibles)
Aliments consommés à la maison	104
Repas pris à l'extérieur	9
Entretien et services ménagers	11
Fournitures ménagères	8
Communication	3

Transports et utilisation de l'automobile	22
Santé et soins personnels	25
Lecture et loisirs	13
Tabacs et boissons alcoolisées	12

How long would it take you to get 10,000 price quotes from 3,500 companies?

A lot longer than it takes to open a copy of **Industry Price Indexes**. Subscribe now, for the most extensive data available on Canadian manufacturing selling prices.

Industry Price Indexes are indispensable if you need current, consistent and reliable reports on price fluctuations at the Canadian factory gate. Uses include preparing escalation contracts, inventory management, charting trends, forecasting price changes or compiling data to create your own index.

This monthly publication covers raw materials, energy and over 700 commodities by 20 major groups. Items listed range from fish fillets to industrial furnaces, cattle to crude oil. Most commodities are reported at the national level, but some are given on a regional basis.

Each issue also provides a historical perspective, with tables of annual averages and monthly price indexes of commodities for the past five years.

As the only periodical of this scope and detail **Industry Price Indexes** is the recognized authority on changes in the selling prices of Canadian manufactured goods.

Get the facts.

A subscription to the monthly **Industry Price Indexes** (Catalogue No. 62-011) is \$182 in Canada, US\$218 in the United States and US\$255 in other countries.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

Combien de temps vous faudrait-il pour obtenir 10 000 propositions de prix de 3 500 compagnies ?

Beaucoup plus de temps qu'il n'en faut pour lire un exemplaire d'**Indices des prix de l'industrie**. Abonnez-vous dès maintenant afin d'avoir accès aux données les plus complètes possible sur les prix de vente des manufacturiers canadiens.

Indices des prix de l'industrie est indispensable si vous avez besoin de rapports à jour, uniformes et fiables au sujet des fluctuations des prix à la production au Canada. Ces indices peuvent servir notamment à préparer des contrats d'indexation, à gérer des stocks, à suivre des tendances au moyen de graphiques, à prévoir des fluctuations de prix ou à compiler des données pour concevoir votre propre indice.

Cette publication mensuelle porte sur les matières premières, l'énergie et plus de 700 produits classés dans 20 grandes catégories. Les articles répertoriés vont des filets de poisson aux fours industriels en passant par les bovins et le pétrole brut. Pour la plupart des produits, les statistiques ont une portée nationale; toutefois, pour certains, elles revêtent un caractère régional.

Chaque numéro donne également une perspective historique; des tableaux indiquent les moyennes annuelles et les indices des prix mensuels des produits au cours des cinq dernières années.

Indices des prix de l'industrie est le seul périodique aussi complet et détaillé. Il fait autorité en ce qui touche les fluctuations des prix de vente des marchandises fabriquées au Canada.

Abonnez-vous !

L'abonnement au mensuel **Indices des prix de l'industrie** (n° 62-011 au catalogue) coûte 182 \$ au Canada, 218 \$ US aux États-Unis et 255 \$ US dans les autres pays.

What happened to the cost of living last month?

The Consumer Price Index will tell you.

Whether you negotiate wage settlements, administer COLA clauses in labour contracts, assess government policies or are involved in renewal contracts, child support or alimony payments, you need current and detailed information on changes in the cost of living.

Compiled monthly (and published within 20 days of the month's end), **The Consumer Price Index** gives you a precise account of the latest fluctuations in consumer prices.

This monthly publication covers:

- transportation
- health and personal care
- food
- recreation, reading and education
- clothing
- tobacco products and alcoholic beverages
- housing

Over 400 items, ranging from milk to parking, household furnishings to reading material, are included.

Price indexes are presented nationally and for 18 major Canadian cities. In each issue you receive month-to-month percentage comparisons and trends over the last five years. And each issue analyzes the main causes of change.

Get the facts.

Subscribe to **The Consumer Price Index** (Catalogue No. 62-001) for the authoritative measure of the purchasing power of the Canadian consumer dollar. A subscription to this monthly is available for \$93 in Canada, US\$112 in the United States and US\$130 in other countries.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Regional Reference Centre listed in this publication.

Qu'en était-il du coût de la vie le mois dernier ?

L'indice des prix à la consommation répond à votre question.

Que vous ayez à négocier des règlements salariaux, à administrer des clauses d'indemnité de vie chère ou à évaluer des politiques gouvernementales, que vous vous occupiez du renouvellement de contrats, de pensions alimentaires ou d'allocations d'entretien, vous avez besoin de données récentes et détaillées sur les fluctuations du coût de la vie.

Établi mensuellement, et publié dans les 20 jours suivant la fin de chaque mois, **L'indice des prix à la consommation** vous renseigne de façon précise sur les plus récentes fluctuations des prix à la consommation.

Cette publication mensuelle porte sur:

- l'alimentation
- l'habillement
- l'habitation
- le transport
- la santé et les soins personnels
- les loisirs, la lecture et la formation
- les produits du tabac et les boissons alcoolisées

Plus de 400 articles sont inclus, allant du lait au stationnement en passant par l'ameublement de maison et le matériel de lecture.

Les indices de prix sont donnés pour l'ensemble du pays et 18 principales villes canadiennes. Chaque numéro présente des comparaisons des pourcentages mois après mois et les tendances au cours des cinq dernières années. En outre, chaque numéro analyse les principales causes de changement.

Abonnez-vous !

L'indice des prix à la consommation (n° 62-001 au catalogue) vous permet d'obtenir une évaluation fiable du pouvoir d'achat du dollar canadien. L'abonnement à cette publication mensuelle coûte 93 \$ au Canada, 112 \$ US aux États-Unis et 130 \$ US dans les autres pays.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6 ou communiquer avec le Centre régional de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

PICK A TOPIC... ANY TOPIC

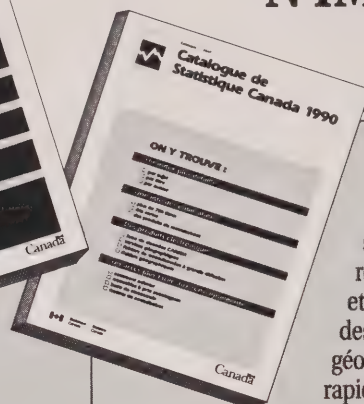

Now a redesigned Statistics Canada Catalogue will simplify your search for the most up-to-date or historic facts. An expanded and improved keyword index, cross-referencing, increased subject detail and listings by geographical area provide easy access to hundreds of Statistics Canada products and services.

- ☐ Know the topic but not the "official title"? No matter how wide or narrow the topic – or how little you know about it – you'll appreciate how quickly the cross-referencing leads you to the right source.
- ☐ You'll find sources of key statistics like consumer price indexes, import/export figures, or population characteristics down to the village level. From the most popular topics of the day like employment, income, trade and education to more detailed research studies like mineral products shipped from Canadian ports or Caribbean immigrants in urban areas... you'll find it all.
- ☐ This expanded edition of the **Statistics Canada Catalogue** includes descriptions of our full range of services – from publications and maps to microdata files and diskettes. And, many of our electronic product listings include the name and phone number of a contact within Statistics Canada giving you a direct line to more detailed information.
- ☐ As always, you'll find sections on how to get more help... on-line search techniques in libraries... discount and order information... and the locations of our Reference Centres. You'll especially appreciate that this year's **Catalogue** is bound in a durable, plasticized cover to withstand intensive use.
- ☐ For ease and completeness in your information search get the **Statistics Canada Catalogue** (cat. # 11-204E) for \$13.95 in Canada, US\$17 in the U.S. and US\$20 in other countries. To order your copy write to Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6 or you can FAX your order to (613) 951-1584. For faster service using VISA or MasterCard, call toll-free:

1-800-267-6677.

CHOISISSEZ UN SUJET... N'IMPORTE LEQUEL

Dorénavant le Catalogue de Statistique Canada amélioré simplifiera vos recherches de données récentes ou historiques. Son index revu et augmenté comprend des renvois, des sujets plus détaillés et des références géographiques vous permettant d'accéder rapidement à des centaines de produits et de services de Statistique Canada.

- ☐ Vous connaissez le sujet sans connaître le terme technique ? Peu importe si le sujet est général ou spécifique, vous apprécierez l'accès rapide que vous procure les renvois.
- ☐ Vous repérerez facilement les sources de statistiques essentielles comme l'indice des prix à la consommation, les importations – exportations ou encore, les caractéristiques de la population jusqu'à l'échelle des villages. Des sujets populaires du jour tels l'emploi, le revenu, le commerce et l'éducation jusqu'aux études plus spécifiques comme les produits minéraux expédiés à partir des ports canadiens ou les immigrants antillais dans les régions urbaines, vous trouverez tout !
- ☐ L'édition augmentée du **Catalogue de Statistique Canada** contient bien plus encore. Elle présente en détail notre gamme complète de services, depuis les publications et les cartes jusqu'aux disquettes et fichiers de microdonnées. Plusieurs descriptions de nos produits informatiques incluent le numéro de la personne-ressource à Statistique Canada. Vous obtenez donc une voie plus directe avec le service de votre choix.
- ☐ Comme toujours, le catalogue contient des sections concernant la façon d'obtenir de l'assistance, les recherches bibliographiques automatisées, les réductions offertes, le guide de commande et l'adresse de nos centres régionaux de consultation. Par ailleurs, vous serez heureux d'apprendre que, cette année, la couverture du catalogue est plastifiée pour résister à un usage fréquent.
- ☐ Pour obtenir rapidement la source d'information la plus complète qui soit concernant nos produits, procurez-vous le **Catalogue de Statistique Canada** (n° 11-204F au catalogue) au prix de 13,95 \$ au Canada, 17 \$ US aux États-Unis et 20 \$ US dans les autres pays. Pour commander votre exemplaire, écrivez à Vente des publications, Statistique Canada, Ottawa (Ontario), K1A 0T6, télécopiez votre commande au 1-613-951-1584 ou utilisez votre carte VISA ou MasterCard et composez le numéro sans frais :

1-800-267-6677.
